GMREIS

Qualidade para Vida

Calidad para Vida Quality for Life الجودة للحياة

GMReis is a Brazilian company that since 1989 operates in the: development, manufacture, and commercialization of implants and surgical instruments for orthopedic and spine surgery.

Technological innovation allied with quality products is the value pursuited daily by the GMReis team, which develops and manufactures products in a modern technology park with 6.000 m^2 in Campinas (SP).

GMReis, Quality for Life.

EDUCATIONAL RESOURCES

WE PROMOTE CONTINUING EDUCATION
WITH OUR CONTENTS

Technical Reports

Our Technical Reports have been carefully written by renowned specialist surgeons to provide valuable information on specific topics: diagnosis, surgical techniques, treatments and related literature; what will certainly collaborate for better treatment decisions for you patients care.

Animations, Clinical Cases and Lives

Animations showing GMReis product's surgical techniques, documented surgeries, and lives with up-to-date themes and cases discussion with renowned surgeons.

Catalogs

All catalogs of the GMReis product line are available for access and download.

EXPERT FAST KNOTLESS

The Expert Fast Knotless is indicated for syndesmosis flexible fixation, and can be used individually or in pairs, including through the GMReis fibula osteosynthesis plates holes.

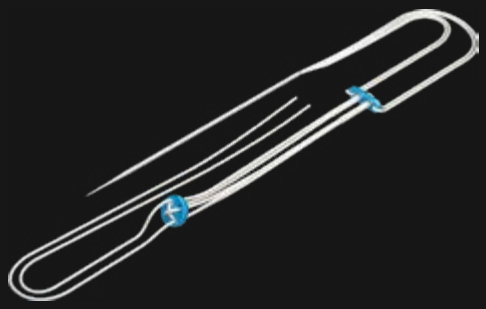
Knotless technology prevents soft tissue irritation and patient discomfort.

The Expert Fast Knotless Syndesmosis is presented assembled on an inserter handle to reduce surgical time and make medial access unnecessary.

CODE	DESCRIPTION
312-2020	*Expert Fast Knotless*

EXPERT KNOTLESS

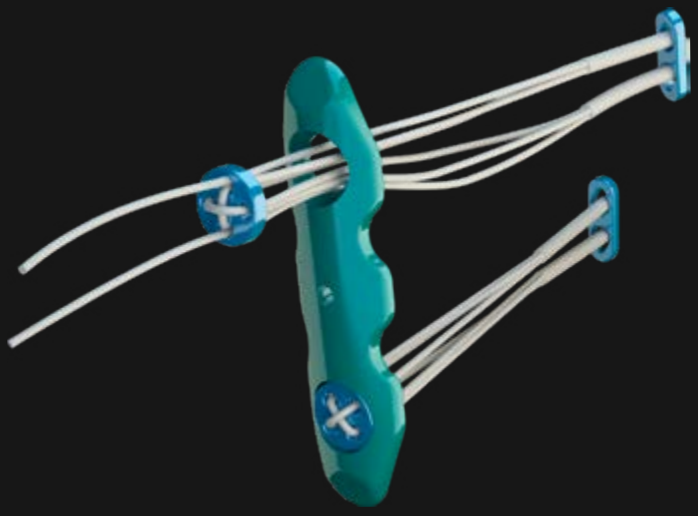
The Expert Knotless is indicated for syndesmosis flexible fixation that can be implanted individually or in pairs, and also through the GMReis fibula osteosyntesis plates fracture plates. Knotless technology prevents soft tissue irritation and patient discomfort.

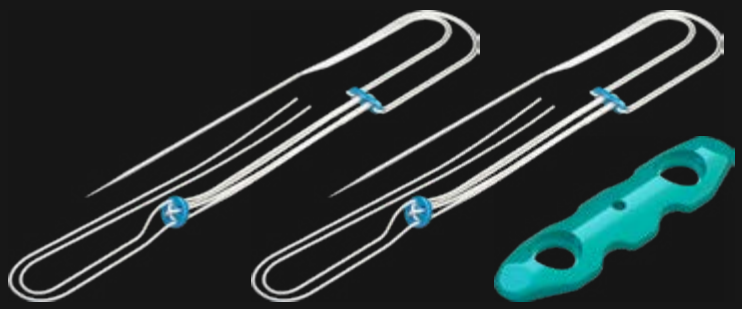


EXPERT KNOTLESS DUAL

The Expert Knotless Dual consists of two flexible fixators and fibular buttress plate, indicated for syndesmosis unstable injuries in patients with: overweight, osteoporosis, high-performance athletes, and injuries with severe instability in the sagittal plane (anteroposterior).

Knotless technology prevents soft tissue irritation and patient discomfort.



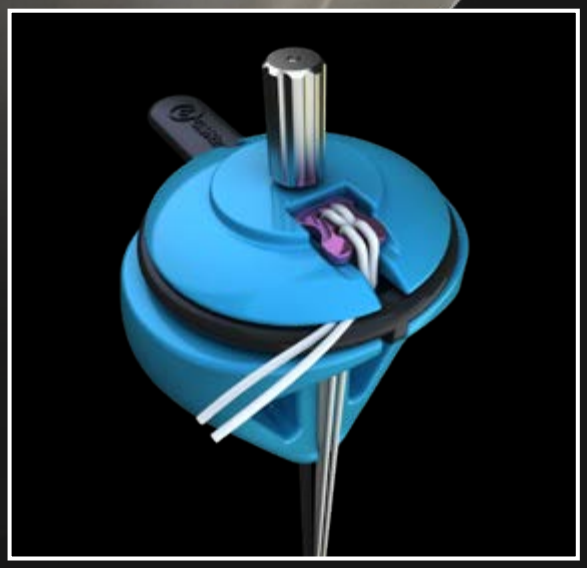


FDA CLEARED

CODE	DESCRIPTION
314-2000	*Expert Knotless Dual - Double Knotless Flexible Fixator*
312-2000	*Expert Knotless - Knotless Flexible Fixator*

EXPERT ACROMIOCLAVICULAR

Coracoclavicular flexible fixation for acromioclavicular joint dislocation treatment.



EXPERT CORACOID PLATE

Coracoclavicular flexible fixation for acromioclavicular joint dislocation treatment, combined with GMReis clavicle osteosynthesis plates.

Upper button specifically developed for coupling with GMReis clavicle osteosynthesis plates.

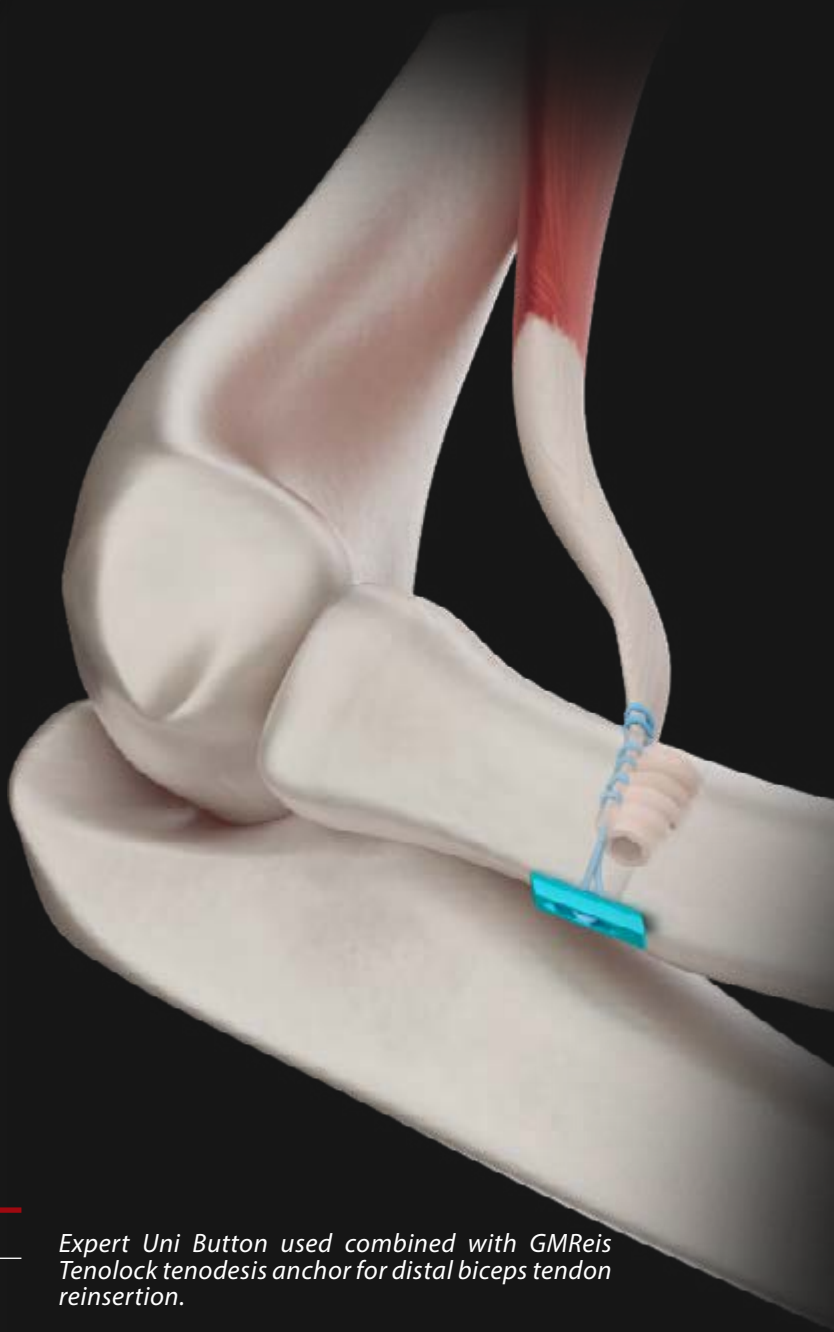
CODE	DESCRIPTION
312-3030	*Expert Knotless AC*
312-3020	*Expert Knotless Coracoid Plate*

EXPERT UNI BUTTON

The Expert Uni button was developed for tenodesis augmentation procedures, through the application of a plate for support in the second cortex, fixed to the tendon using high-resistance sutures.

The Expert Uni button is presented loaded on an inserter handle, with two UHMWPE needled sutures.

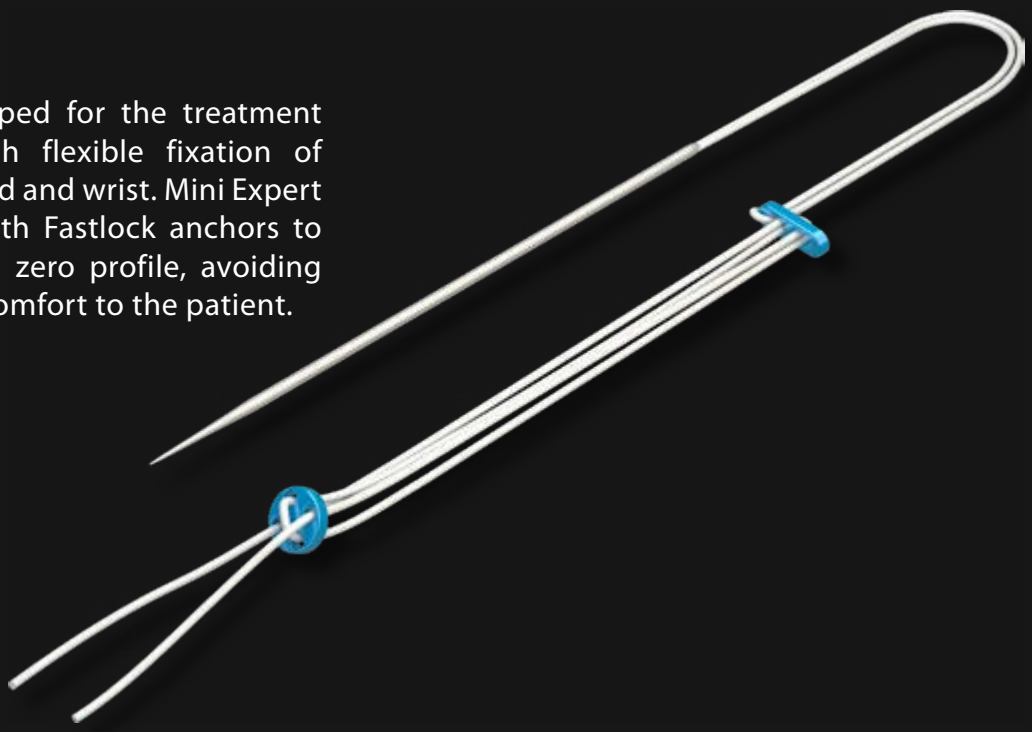
CODE	DESCRIPTION
310-1000	*Expert Uni Button*



Expert Uni Button used combined with GMReis Tenolock tenodesis anchor for distal biceps tendon reinsertion.

MINI EXPERT

The Mini Expert was developed for the treatment of ligament injuries through flexible fixation of extremities joints as: foot, hand and wrist. Mini Expert can be applied combined with Fastlock anchors to provide flexible fixation with zero profile, avoiding soft tissues irritation and discomfort to the patient.



Figs.: The application of Mini Expert for flexible fixation of Lisfranc injury (left) and the option of use combined with Fastlock anchors for zero profile (right).

FDA CLEARED

Fig.: Mini Expert applied for flexible fixation of the distal radioulnar joint.

Figs.: Application of the Mini Expert for suspensionplasty in a trapezectomy procedure for the treatment of rizarthrosis (left) and the option of use combined with Fastlock anchor for zero profile (right).

CODE	DESCRIPTION
311-2000	*Mini Expert- Mini Flexible Fixator*

EXPERT KNOTLESS ACL2

The device was developed for the treatment of anterior cruciate ligament reconstruction treatment using buttons for the medial proximal tibia and for the lateral distal femur; with knotless adjustment system and tape augmentation option.

SUPPORT PLATE FOR EXPERT ACL

Support plate designed to attach to the lateral femoral plate of the Expert Knotless ACL2 and Expert Knotless Augmentation ACL2 products, expanding the system's contact surface in cases of cortical breakage, plate sinking, revision procedures, or when the surgeon chooses to perform a bicortical tunnel for the graft and need a larger plate.

CODE	DESCRIPTION

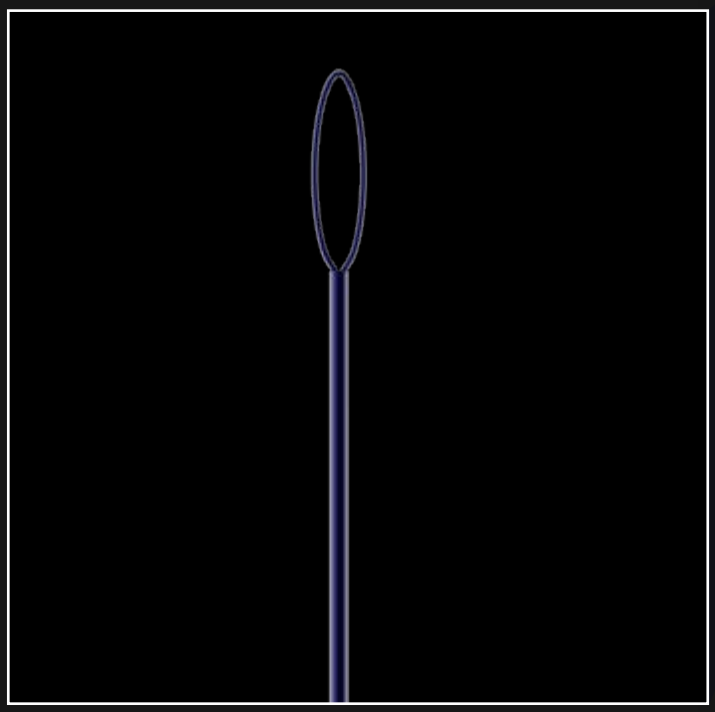
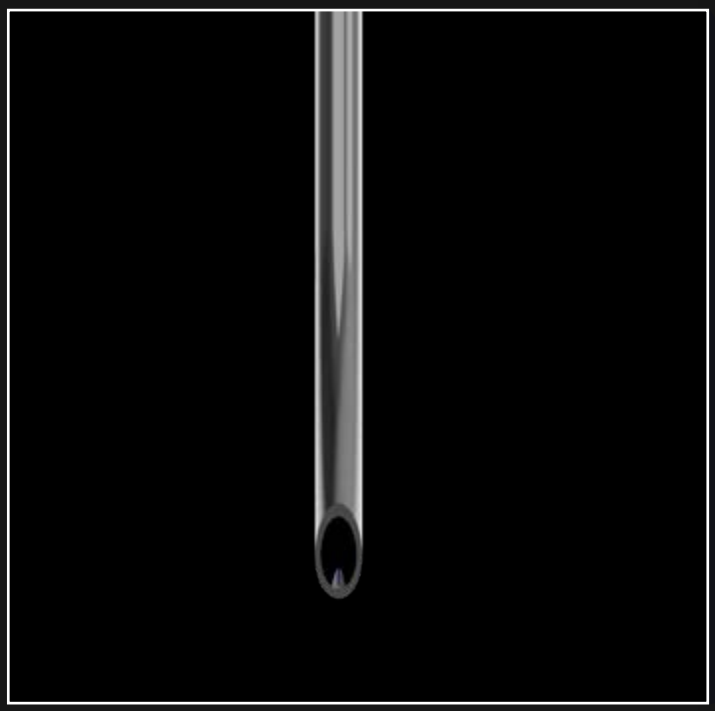
MENISCUS OUT IN

Surgical device developed for use in the treatment of meniscus injuries, with the outside-in technique.





FDA

CODE	DESCRIPTION
354-100-050	*Meniscus Out-In*

MENISCUS VERSAFLEX

The Meniscus Versaflex was developed by GMReis to provide surgeons all-inside treatment for meniscal lesions, composed of two PEEK buttons and #2-0 knotless suture.

The repair system is guided by a needle with flexible shaft that allows access to all meniscus zones using the standard anterior portal.

The application mechanism allows implantation using only one hand.

PEEK buttons delivery device.

Device for adjusting needle depth: 12 mm, 16 mm and 20 mm.

Flexible and bendable shaft provides access to all zones of the meniscus using the standard anterior portal.

Protective tube for the Meniscus Versaflex Inserter developed to facilitate knee joint introduction and removal, eliminating the need for cannulas that would increase access.

	CODE	DESCRIPTION
	354-300	*Meniscus Versaflex*
	354-400	*Meniscus Versaflex Reverse*

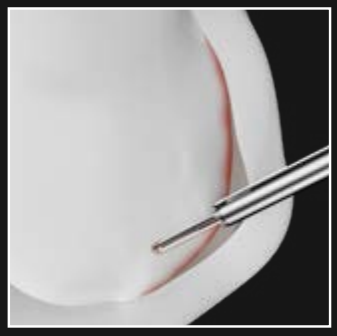
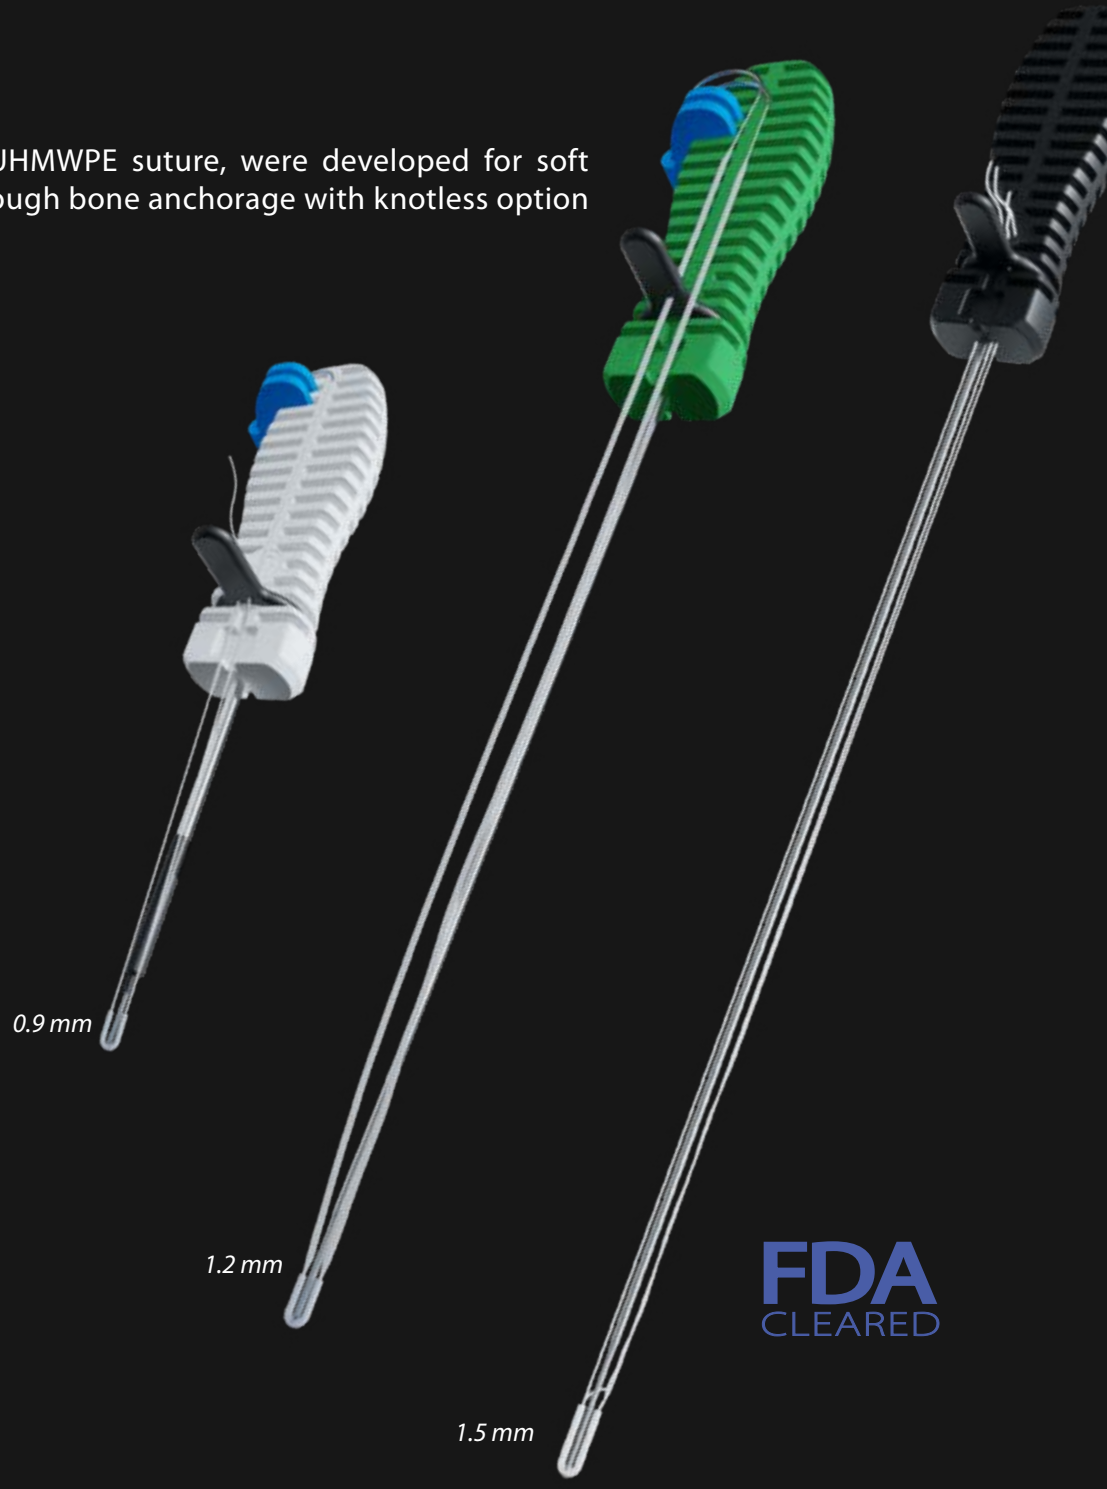
All-inside Technique

ZIP ANCHORS

The Zip Anchors, made of UHMWPE suture, were developed for soft tissue injuries treatment, through bone anchorage with knotless option for zero profile.





FDA CLEARED

The Zip Anchors surgical technique provides excellent anchorage with less perforation to preserve the bone stock.

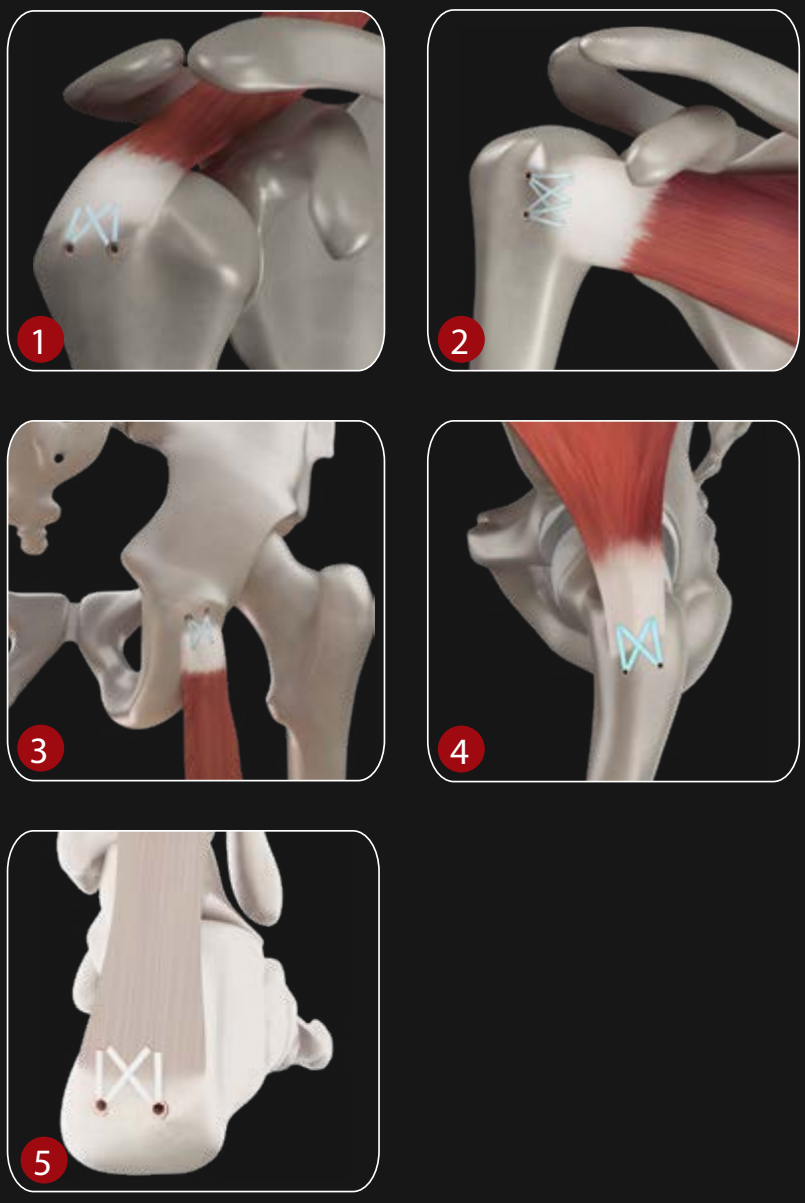
FASTLOCK

Fastlock Knotless Tape Loaded Anchors were developed for the treatment of ligament or tendinous injuries using the ILA - Internal Ligament Augmentation and Fastbridge techniques.

The **ILA - Internal Ligament Augmentation** consists of augmentation for ligament repair or reconstruction, providing safe treatment and accelerated recovery.

Figs: Examples of the use of Fastlock anchors for ILA: acromioclavicular (1), lateral collateral ligament of the elbow (2), dorsal scapholunate (3), ulnar collateral ligament of the thumb (4), pubic symphysis (5), medial collateral ligament of the knee (6), anterior talofibular ligament (7) and deltoid ligament (8).

Fastbridge is a technique for tendinous repair or reinsertion through the application of four or more anchors, providing a safe treatment and rehabilitation of the patient.



Figs.: Examples of the use of Fastlock anchors for Fastbridge technique: repair of the rotator cuff (1), subscapularis (2), hamstrings (3), gluteus medius (4), and Achilles tendon reinsertion (5).

HTA - HEADLESS TITANIUM ANCHORS

Titanium anchors developed for ligament and tendons injuries repair, with several options of diameters and lengths for better adequacy to each implantation region.

All anchors are assembled in an inserter handle with needled surgical suture, manufactured with UHMWPE polymer (polyethylene of ultra-high molecular weight), which is biocompatible, and has high resistance against abrasion, breaking, stretching, and knot loosening or releasing.

*Insert handle with internal connection in the anchors provides **ZERO PROFILE**, decreasing discomfort, and soft tissue irritation.*

OPTIONS:

Ø1.7 mm x 5.0 mm
Ø2.2 mm x 4.0 mm
Ø2.7 mm x 7.0 mm
Ø3.5 mm x 10.0 mm
Ø5.0 mm x 14.0 mm

Needles and wires are accommodated inside the inserter handle to facilitate handling and reduce surgical time.

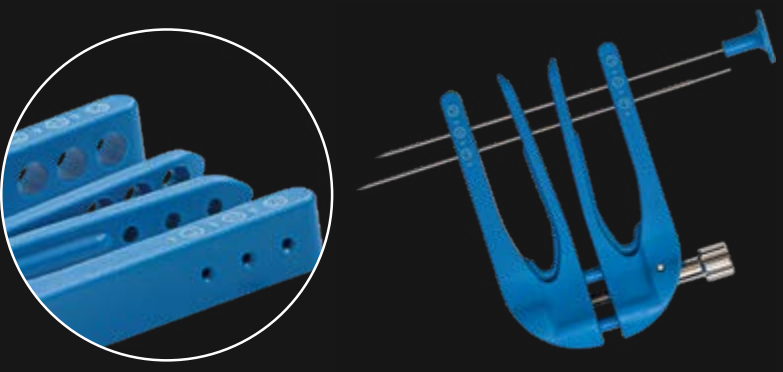
STA

Minimally invasive suture system of the Achilles tendon using sterile single-use instruments.



FDA

KIT STA – AQUILES TENDON SUTURE SYSTEM

CODE
233-01

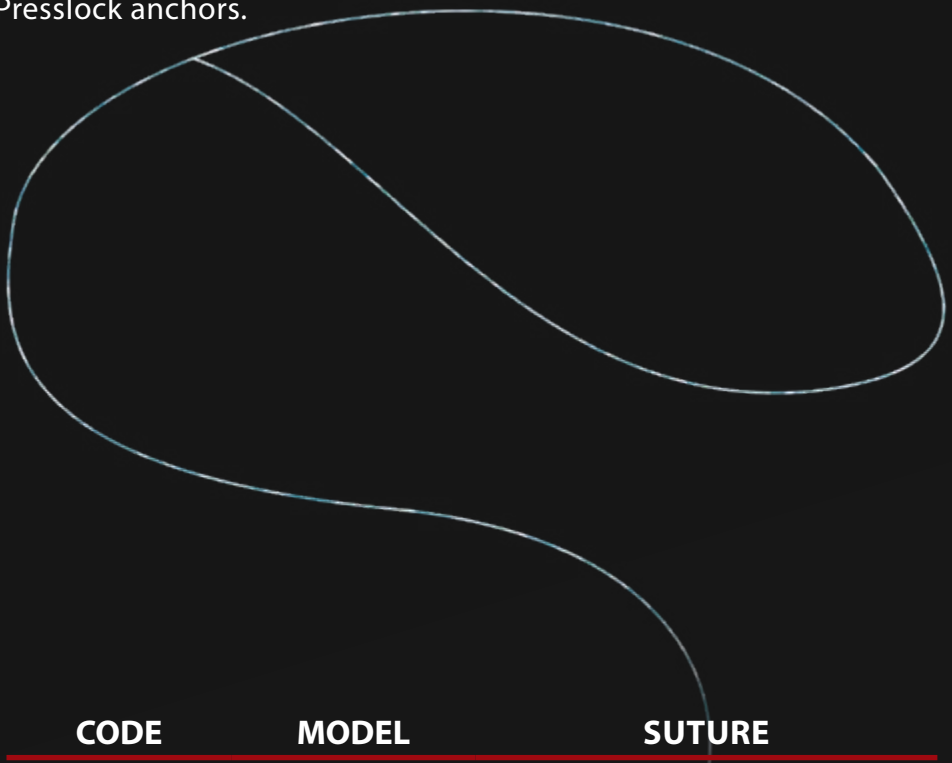
Fig.: STA combined with Fastlock anchors and Stitch tapes for the STA Bridge technique, which are indicated for patients with poor quality of the Achilles tendon distal stump or with rupture close to the calcaneal bone insertion.

STITCH LOOP

High resistance suture with both ends fixed on a single needle, ideal format for tendon repair, facilitating the procedure and reducing surgical time, with options #2-0, #0 and #2.

STITCH LINK

High resistence suture #2 with a loop at one end, designed to perform knotless sutures, with bone anchorage performed with GMReis Fastlock or Presslock anchors.



GMReis Stitch surgical sutures and tapes are produced in ultra high molecular weight polyethylene UHMWPE.

CODE	MODEL	SUTURE

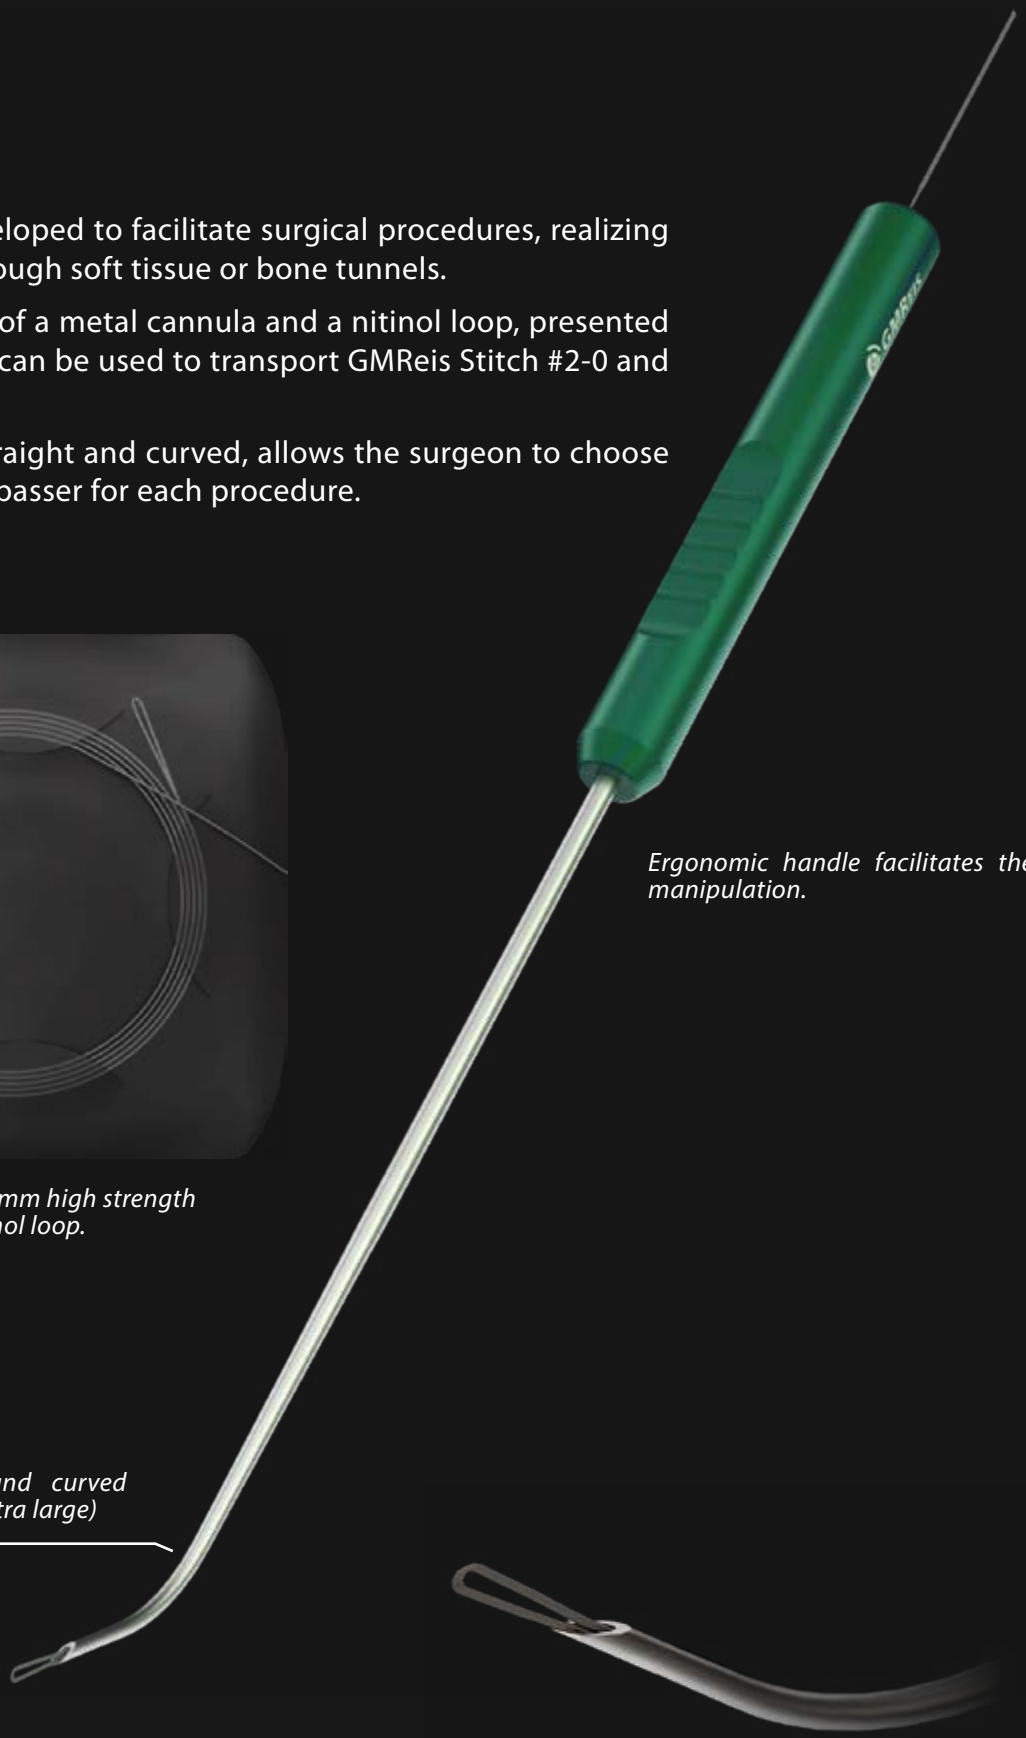
EASYPASS

Suture passers were developed to facilitate surgical procedures, realizing the sutures transport through soft tissue or bone tunnels.

The system is composed of a metal cannula and a nitinol loop, presented in sterile packaging, and can be used to transport GMReis Stitch #2-0 and #2 surgical sutures.

The variety of models, straight and curved, allows the surgeon to choose the most suitable suture passer for each procedure.

Ø0.25 x 560.0 mm high strength nitinol loop.



Ergonomic handle facilitates the manipulation.

Five options: straight and curved (tight, small, large, and extra large)

Micro Holes suture passers are supplied in sterile, single-use packaging, and Ø0.25 x 560.0 mm nitinol loop included.

VERSALOCK ANATOMICAL FIBULA PLATES

Anatomic plates developed for the treatment of: fractures, osteotomies and pseudoartrosis of distal fibula, with 2.7 / 3.5 mm +/-15° variable angle screws holes, and dynamic compression options; made of titanium. The plates are compatible for combined use with Expert Knotless for syndesmosis flexible fixation, and Fastlock Anchors Stitch Tape for ligaments augmentation: AITFL, PITFL and ATFL.

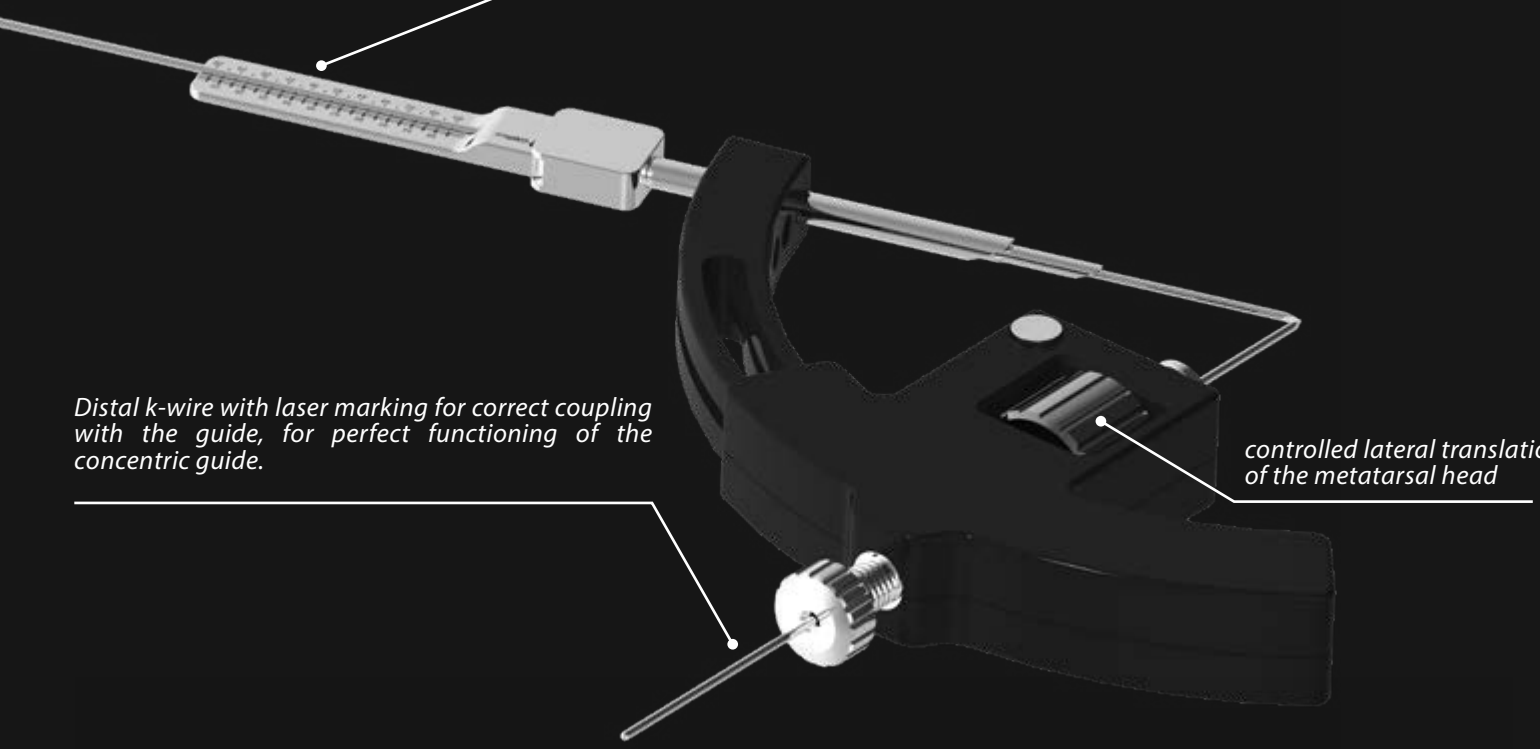
MICA GUIDE

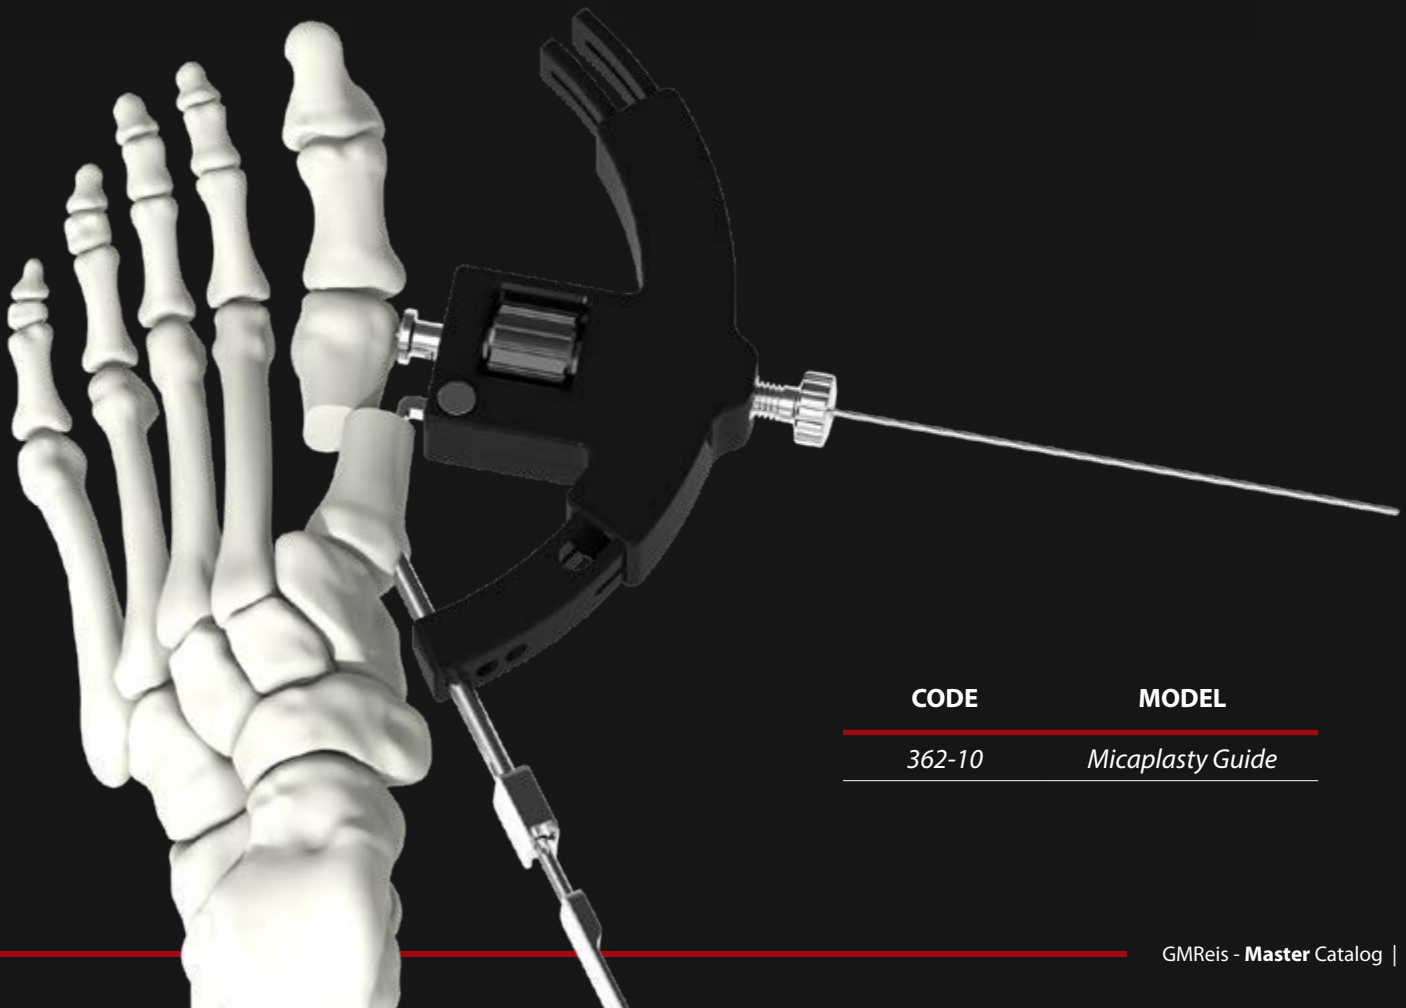
The MICA Guide was developed to provide the surgeon precision in the percutaneous osteotomy procedure and screw fixation for hallux valgus correction.

Concentric guide allows precision in the application of the proximal screw in the metatarsal head, coinciding with the tip of the distal k-wire.



Distal k-wire with laser marking for correct coupling with the guide, for perfect functioning of the concentric guide.

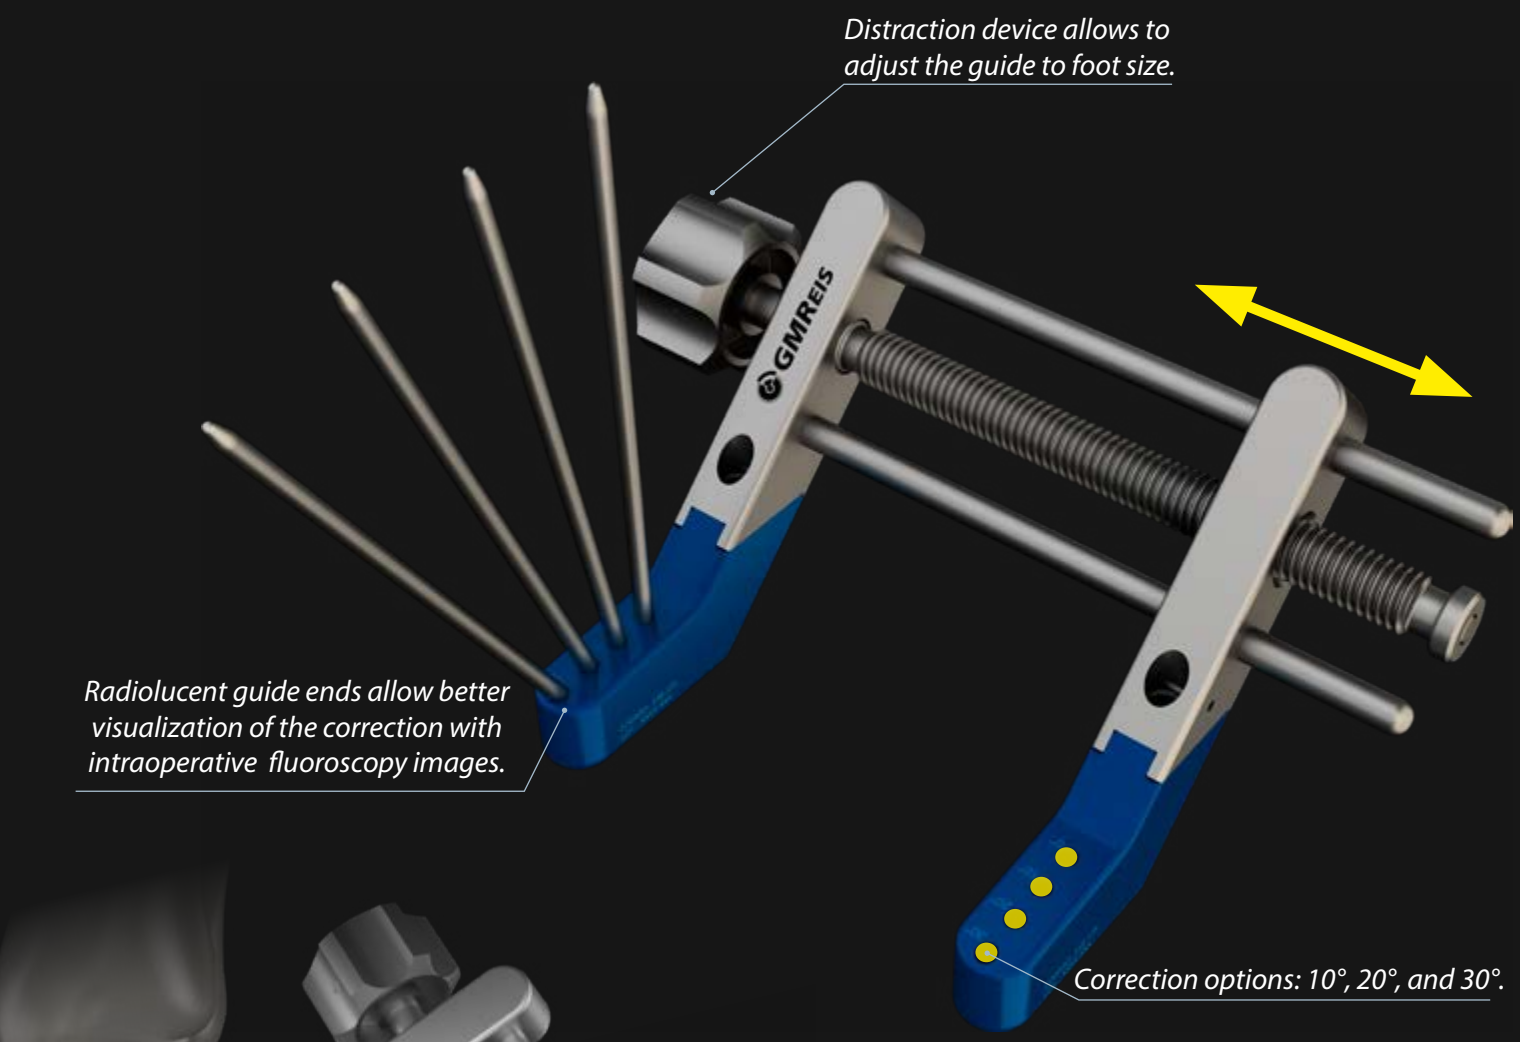
controlled lateral translation of the metatarsal head



CODE	MODEL
362-10	*Micaplasty Guide*

MIRO - MINIMALLY INVASIVE ROTATION OSTEOTOMY

O MIRO - Minimally Invasive Rotation Osteotomy was developed to allow the surgeon to accurately correct hallux pronation[1], by improving metatarsal head rotation during the percutaneous osteotomy procedure for hallux valgus correction.



FDA

PDR CANNULATED SCREWS

Double thread cannulated screws, with zero profile, and short thread for compression of foot bones: fractures, osteotomies, arthrodesis and pseudoarthrosis; made of titanium.

See all the PDR screw diameter options in the Cannulated Screws section on page 99.

TWIST OFF SCREWS

Breakable screws with removable upper part to provide zero profile, with self-drilling tip, developed for fixing mini and micro fragments of the foot bones, made of titanium.

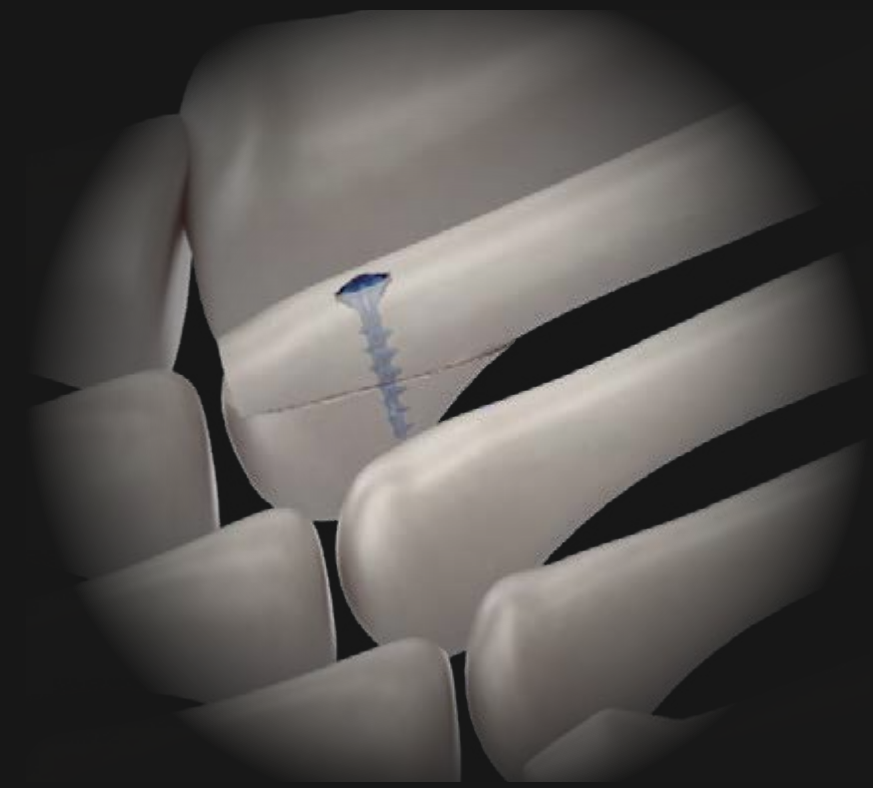

Fig.: Twist Off breakable screw used for Weil osteotomy fixation.

CARPOLUX

The Carpolux is a surgical device developed for procedure to release the carpal tunnel, supplied sterile and for single use.

Carpolux's built-in lighting system provides better visualization of the treated region, allowing a safe and effective technique, reducing surgical time and soft tissue morbidity.

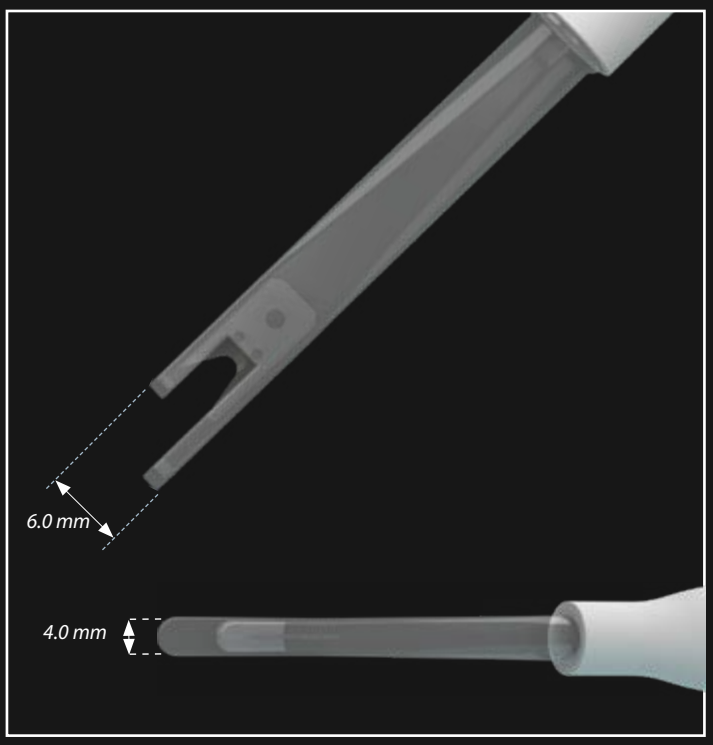

Fig.: Cutting blade isolated by the atraumatic tip of the Carpolux.

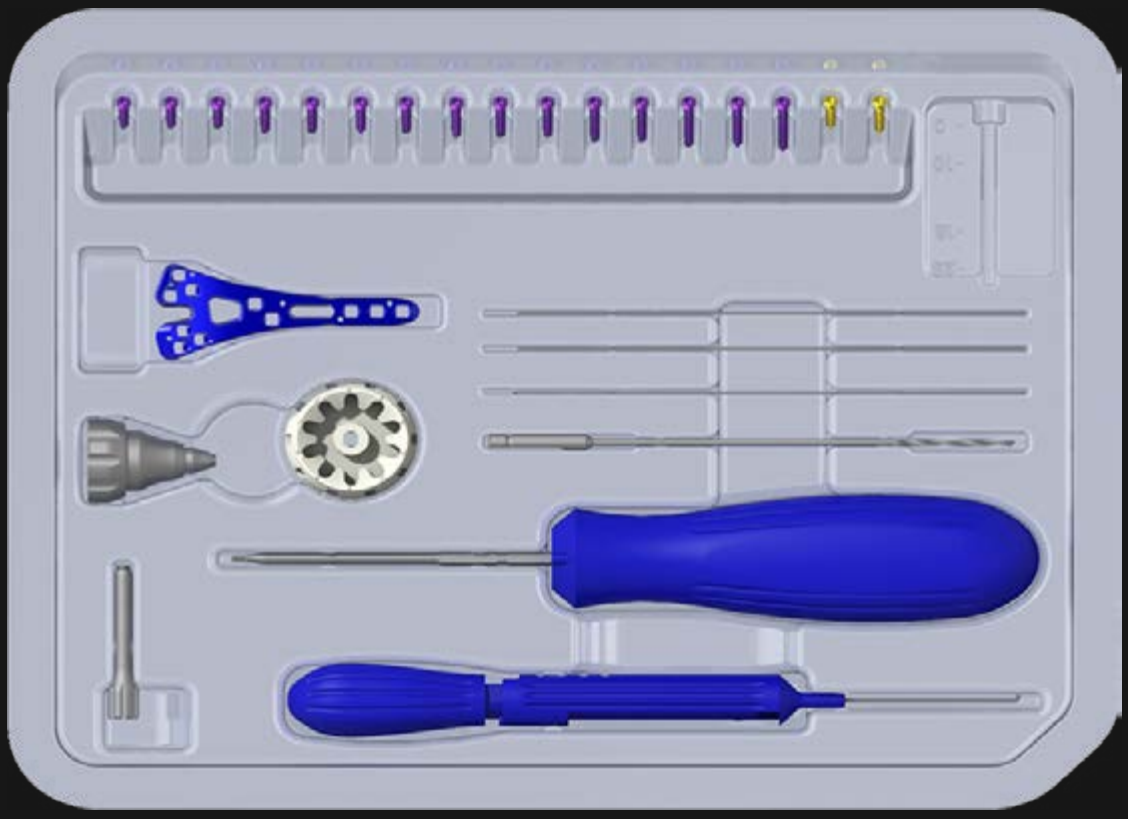
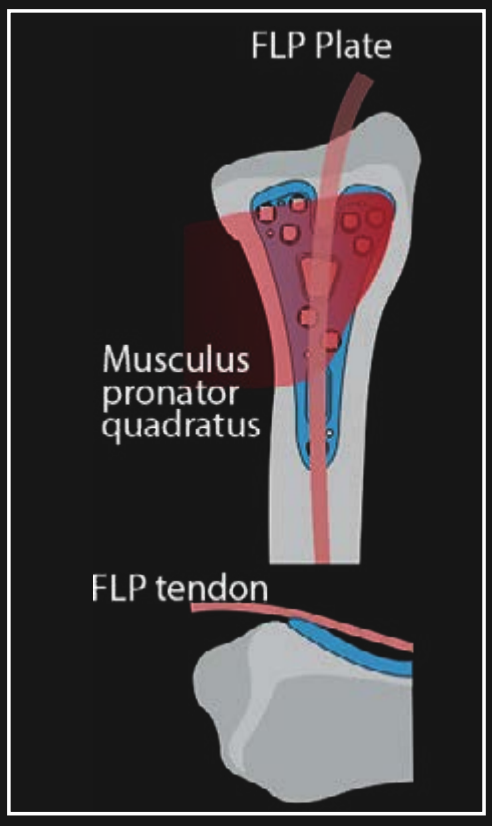
QUICK - RADIUS SINGLE USE DISPOSABLE SET

Complete sterile set for distal radius fracture fixation system, with FLP volar variable angle locking plate, screws, and instrumental set: drill guide, drill bit, depth gauge and screw driver with torque limiter.



FDA CLEARED



FLP Plate design with a central recess minimizes flexor pollicis longus tendon contact injury, even with the more distal positioning of the plate.

- ☑ Decrease sterilization cost and processing time;
- ☑ Reduced suppliers stock cost and labor control time;
- ☑ Reduced delays due set unavailability and,
- ☑ Increase OR efficiency.

THE FUTURE IS NOW!

VERSALOCK VOLAR FLP PROTECT PLATES

Anatomical plates were developed for the treatment of fractures, osteotomies, and pseudarthrosis of the distal radius with a volar approach, with holes for Ø2.4 / 2.7 mm locking screws with a +/-15° variable angle. The plate has a special design to prevent contact and irritation of the flexor pollicis longus, even when the plate is close to the joint, made of titanium.

The Versalock Volar FLP Protect Plate can be used superimposed on the Micro Hook Plate for micro fragments fixation from the distal edge of the radius.

REDUX - COLLINEAR GUIDES

The GMReis Collinear Guides were developed to assist the surgeon in fractures reduction and temporary fixation of the fragments, in the treatmens of: joints, long bones (tibia and femur) and the pelvis fractures.

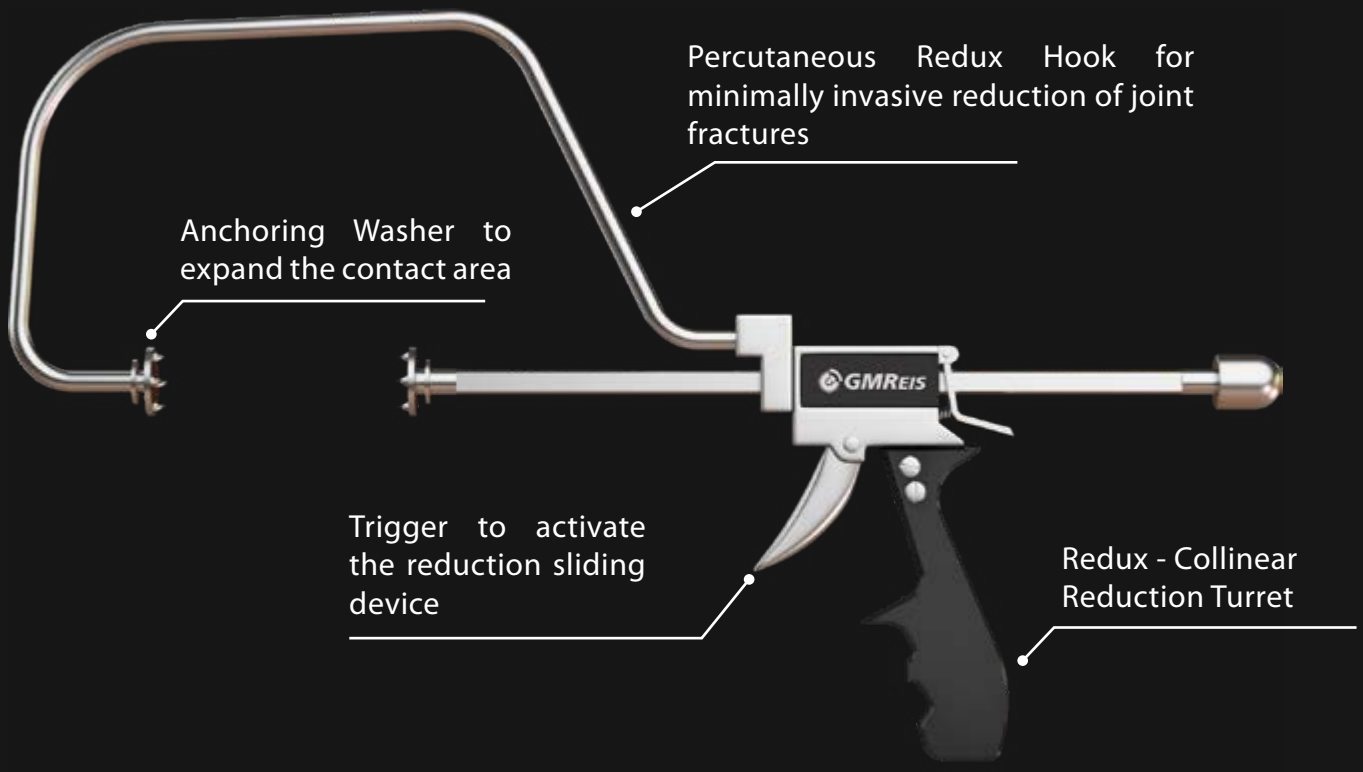

Fig.: Minimally invasive reduction of condylar fracture with the Percutaneous Redux Guide.

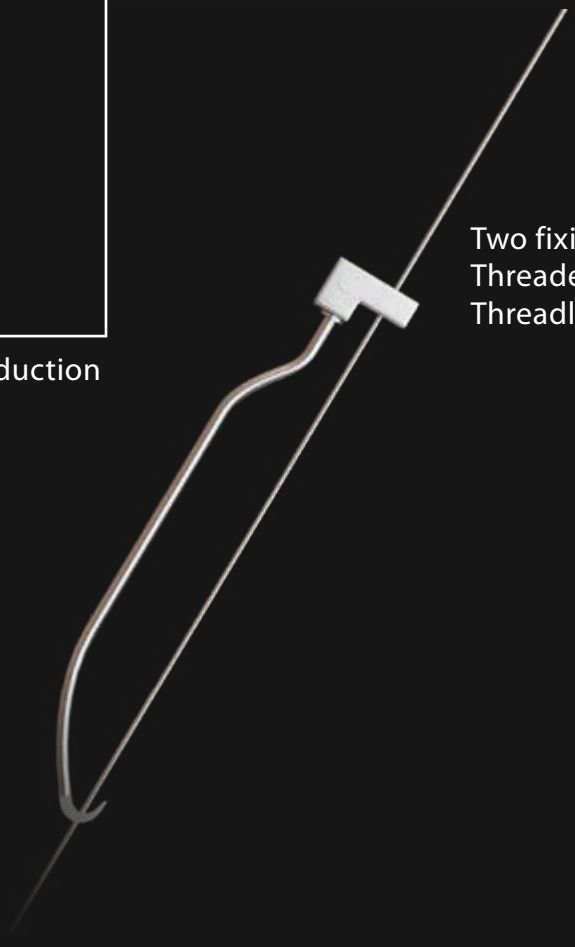
Pelvic Redux Guide for minimal invasive reduction of pelvic fractures



Two fixing options:
Threaded Collinear Guide
Threadless Collinear Guide

Hohmann type Redux guide for minimally invasive reduction of long bone fractures (tibia and femur).

VERSALOCK PERIPROSTHETIC DISTAL FEMUR PLATES

Anatomical plates were developed for the periprosthetic treatment of femur fractures, distal application, with holes for Ø5.0 mm +/- 15° variable angle locking screws, triple holes for better fixation around the prosthesis, monocortical periprosthetic screws and fixation option with cerclage cable locked in the plate, made of titanium.

FDA CLEARED

VERSALOCK MIS CONDYLAR FEMUR PLATES

Minimally invasive anatomical plates developed for the treatment of femur complex fractures. The plate has holes for Ø5.0 mm +/- 15° variable angle locking screw, solid or cannulated, Ø4.5 mm dynamic compression, radiolucent external guide, compatible with Versalock periprosthetics and locked cerclage cable periprosthetic system, made of titanium.

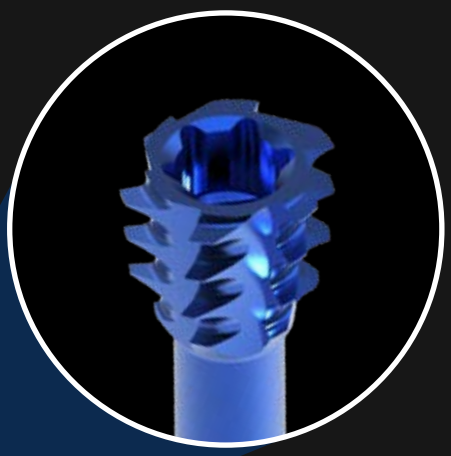
Access GMReis Canulated Screws

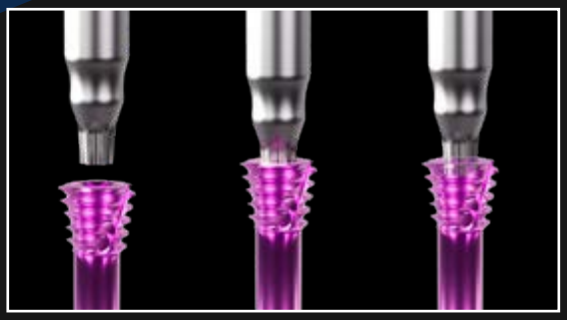
PDR

The PDR - Headless Cannulated Compression Screws were developed for the fixation of: fractures, pseudarthrosis, osteotomies and arthrodesis; with percutaneous application and zero profile.



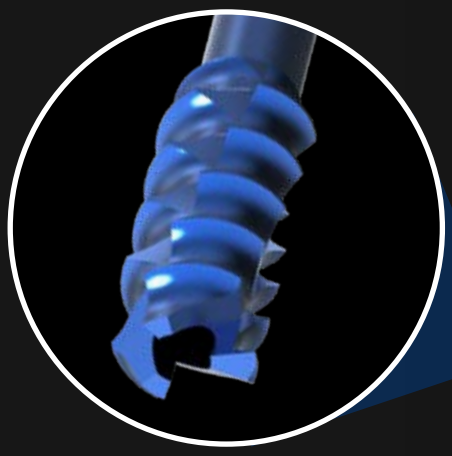
Diameter options:
Ø1.7, 2.2, 3.0, 5.5 and 7.5 mm.

Torxdrive Connection



Self-tapping screw head facilitates the implantation with zero profile.

Torxdrive hexalobular connection provides better coupling and torque transmission between the screwdriver and screw, with self-retain.



Self-tapping across all screw thread facilitates the implantation and screw remove.

Self-tapping and self-drilling screw tip to reduce surgical time.

Cannulated screws allow wire-guided application.

Titanium 6al4V ELI - ASTM F 136.

226-58-AL	*350.0 mm Ruler*
226-59-AL	*400.0 mm Ruler*

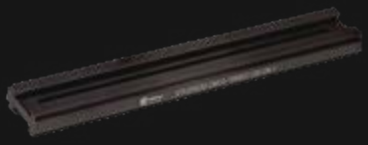
Components for basic correction:

226-61 - Straight Clamp

223-63 - Inclination Clamp

226-146 / 226-148 - Compression Distractor Device

226-64 - Dyna Clamp



Ruler

Special Components:

Added to the components for basic correction, special clamps allow assemblies for treatment of specific deformities, and expand the possibilities of fixation.

SPECIAL COMPONENTS

HYBRID EXTERNAL FIXATION SYSTEM

Hybrid external fixation system composed of semi-ring and carbon fiber rods, developed for proximal or distal tibial fixation, with Schanz pins and metallic wires. Compatible with the Ergofix monolateral external fixation system.

Fig.: Distal tibia frame

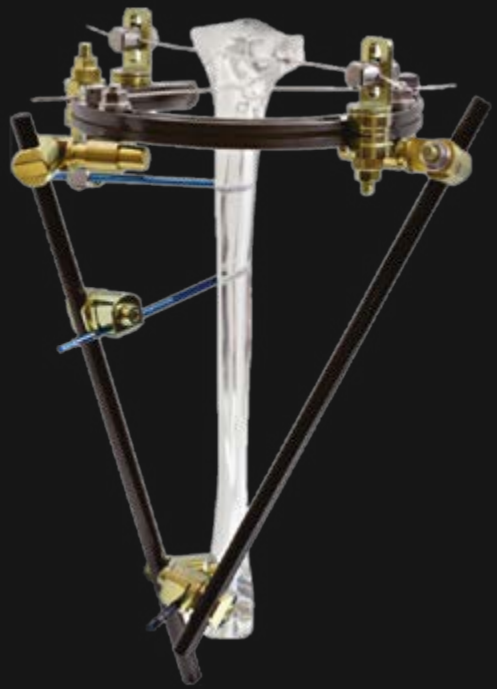

Fig.: Proximal tibia frame.

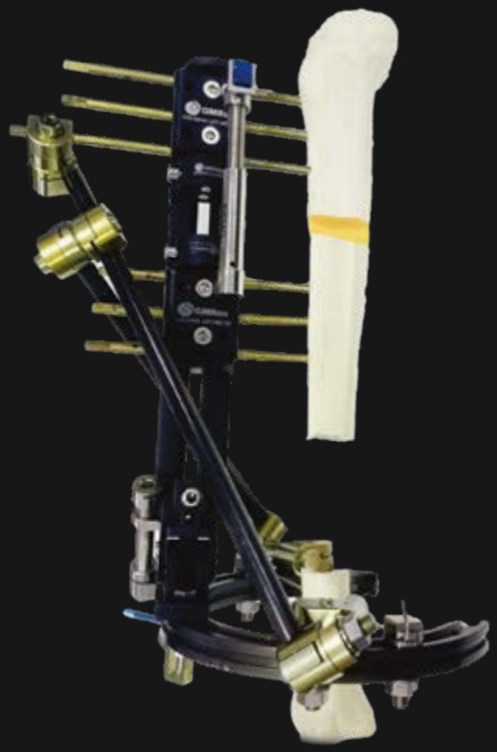

Fig.: The Hybrid Fixation system can be used together with the components of the Ergofix fixator for tibial reconstruction.

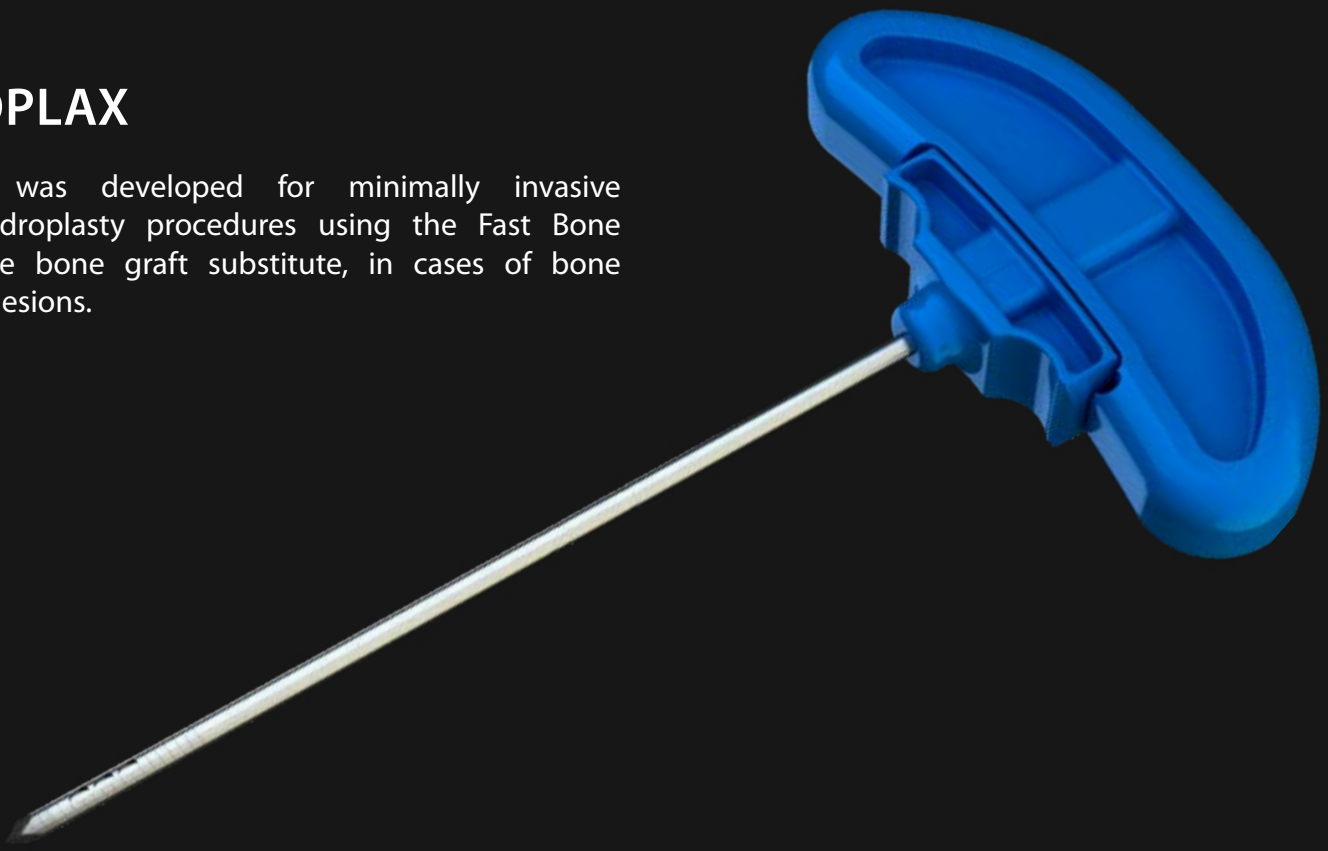
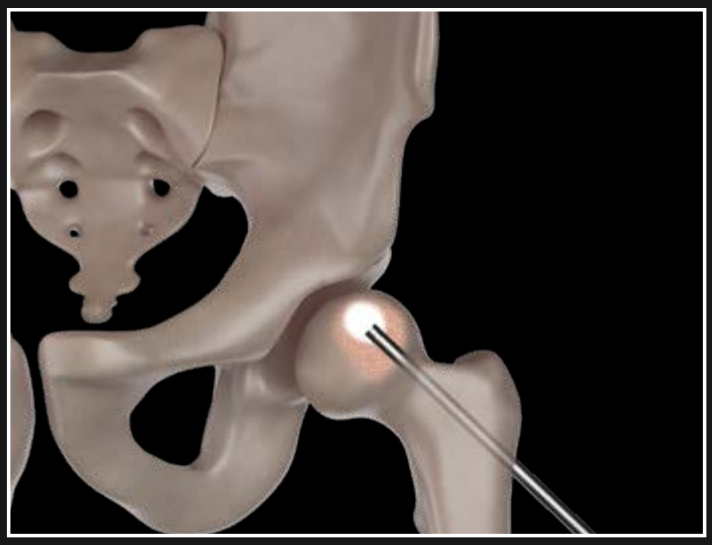
BIOPLAX

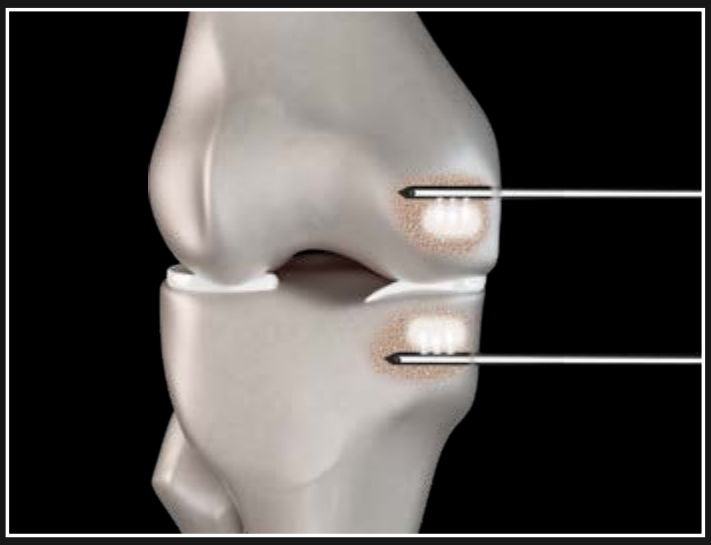
Bioplax was developed for minimally invasive subchondroplasty procedures using the Fast Bone injectable bone graft substitute, in cases of bone marrow lesions.

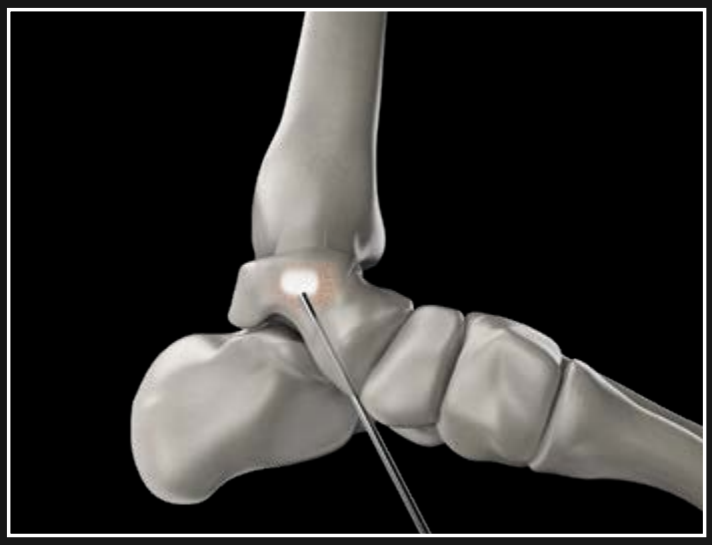


Figs.: After positioning the Bioplax into lesion region, confirm the position by X-ray, take out the upper part and attach GMReis Fastbone Syringe to Apply the graft. The upper part of the cable is removed to attach the Fast Bone syringe to apply the graft.

Figs.: Humeral head bone marrow lesion treated with GMReis Bioplax combined with Fast Bone injectable bone graft substitute.







Figs.: Examples of Bioplax indications: shoulder, hip, knee and ankle.

FAST BONE - INJECTABLE BONE GRAFT SUBSTITUTE

Bone graft substitute: synthetic, biocompatible, resorbable and osteoconductive, made with ß-TCP and Calcium Sulphate, supplied with an application syringe with a device for totally aseptic mixing, of quick preparation, for filling bone cavities.

FAST BONE provides quick preparation and hardening, reducing surgical time:

- Mixing time: 30 seconds and,
- Setting time: approximately 10 minutes.

FAST BONE

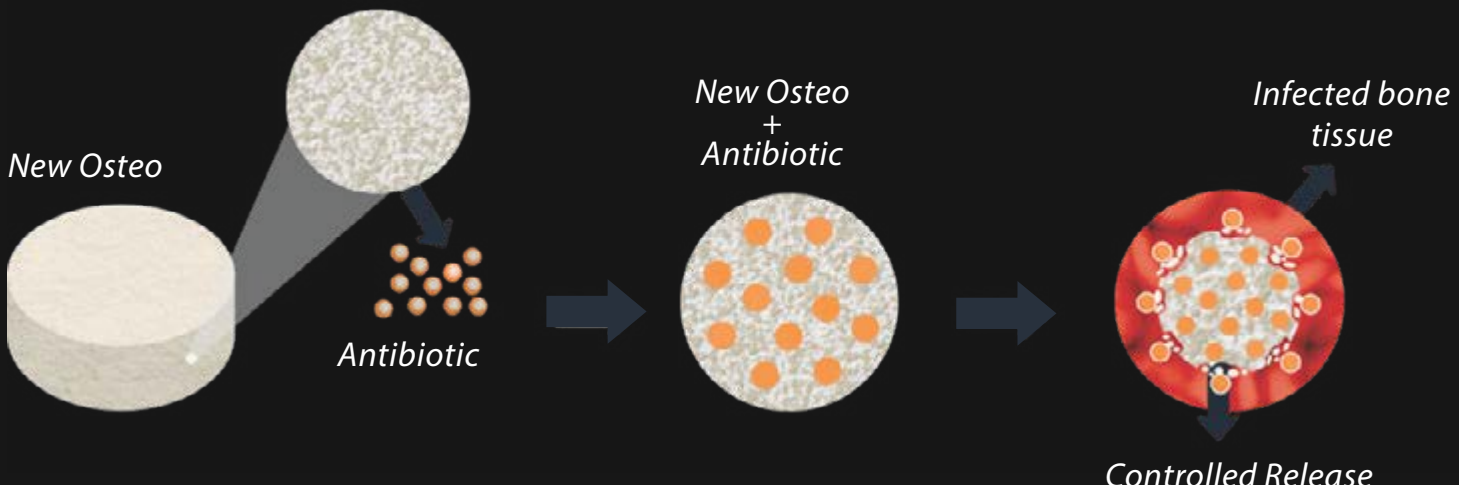
Powder



OSTEO-PACK

The Osteo-Pack - bone pellet preparation kit was developed for the preparation of New Osteo - Inorganic Bone Graft Substitute Powder, in procedures where bone grafts are required to fill cavities/bone defects that are not intrinsic to the stability of the bone structure. The Osteo-Pack consists of 1 silicone mold (with 3mm cavities on the front and 4mm and 6mm cavities on the back) and two spatulas for preparing and applying New Osteo to the mold. New Osteo is not part of the Osteo-Pack product and is sold separately. The Osteo-Pack is sold sterile, single-use and disposable after use.

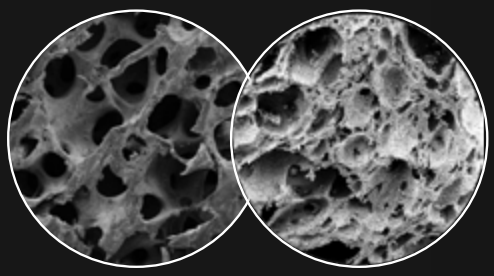
SPONJOSA

Sponjosa mimetizes both the chemical composition and the physical structure of natural cancellous bone, presenting a trabecular structure with interconnected channels, consisting of different pore sizes (from 1µm to 1000µm) that occur simultaneously, oriented in multiple directions.



Cancellous bone structure

Sponjosa structure

SPONJOSA - SYNTHETIC CANCELLOUS BONE ß-TRICALCIUM PHOSPHATE (ß-TCP)

CODE
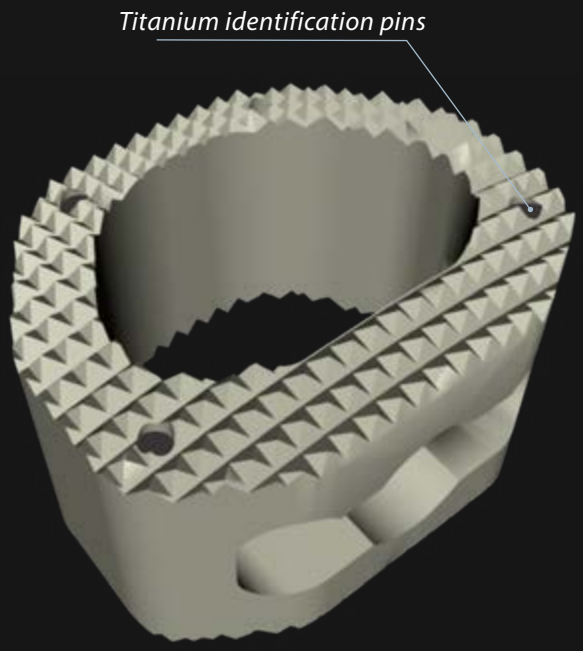
236-10

ATRIUM C-PEEK

Anatomic cervical intervertebral spacer developed for discectomy procedures and cervical arthrodesis with anterior approach.

Atrium C-PEEK has toothed surfaces that assist in the fixation of the implant and pins of identification for positioning visualization in radiological image.

Anatomical shape



ATRIUM C PEEK

CODE	HEIGHT
173-23-P	*4.7 mm*
173-15-P	*5.7 mm*
173-16-P	*6.7 mm*
173-17-P	*7.7 mm*
173-18-P	*8.7 mm*
173-29-P	*9.7 mm*

ASTM F 2026 PEEK is a thermoplastic material, biocompatible due to the combination of its chemical and mechanical properties: this material has high chemical stability and mechanical properties closer to cancellous bone, when compared to steels and titanium alloys.

The use of PEEK in the manufacture of implantable products has the advantage that the material is radiolucent, which allows the monitoring of intervertebral fusion through observation of radiological images.

SOPHIRA PLATE

The 1.7 mm low profile Sophira plate was developed for the treatment of cervical spine pathologies through arthrodesis of one or more levels, optimizing the intervertebral fusion process. The plates are pre-molded to adjust to the anatomical curvature of the cervical spine, have a built-inlocking mechanism.

OCCIFIX II

Posterior cervical spine fixation system, with options for occipitocervical and cervicothoracic fixation (up to T2); compatible with the Pedimax II system for expanding thoracic fixation.

The Occifix II system offers two occipital fixation options: center plate and hybrid plate/rod.

The system provides vertebral options: polyaxial screws, sublaminar hooks and cancellous screws used with angled connectors.

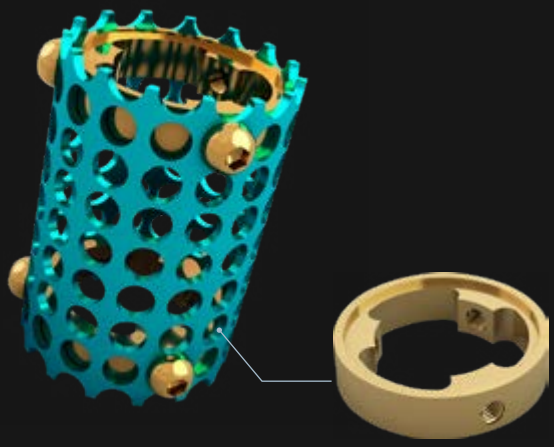
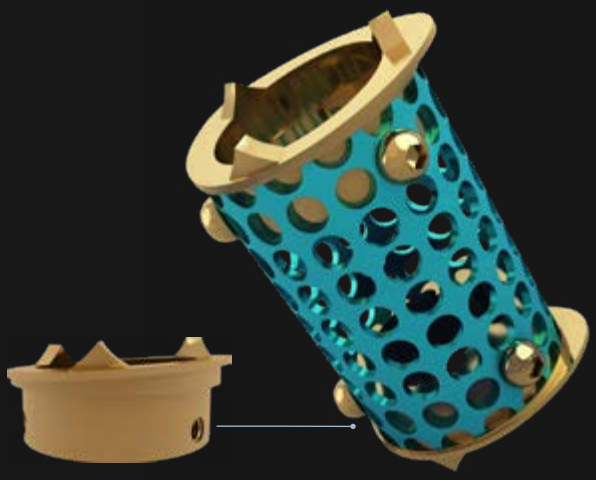
ROM MESH

Titanium vertebral body replacement spacers, with diameter and length options for cervical, thoracic and lumbar vertebrae, ample space for graft placement and rings that increase the biomechanical strength of the implant and reduce the risk of penetration into the adjacent vertebral body.



Rom rings increase the safety of the implant.



Rom rings with 8° lordosis for lumbar application.

TLIFIX PEEK

Transforaminal Lumbar Interbody Fusion PEEK spacers developed for discectomy and arthrodesis procedures, with several height options to better fit the patient's needs. Large area for grafting, knurled surfaces for better fixation and titanium pins for visualization of implant positioning in radiological images.

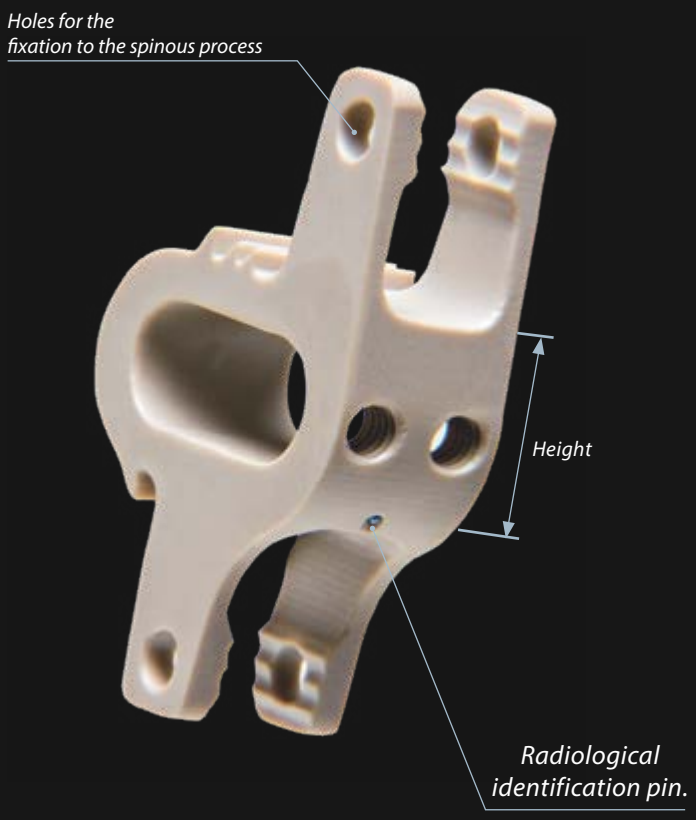
DYNAFIX PEEK

Dynamic interspinous spacer in PEEK, developed to stabilize the lumbosacral spine, partially restricting the mobility of the treated level, maintaining the height of the root foramen and reducing tension on the posterior joints.



PEEK DYNAFIX INTERSPINOUS SPACER

CODE	HEIGHT
162-07-P	*8.0 mm*
162-01-P	*10.0 mm*
162-02-P	*12.0 mm*
162-03-P	*14.0 mm*

GAMA CABLE

Multifilament cable made of titanium alloy, Ø1.1 mm, 420.0 mm long and 100 mm semi-rigid tip that facilitates application; developed for cerclage of vertebral levels and fixation of the Dynafix Peek interspinous spacer.

GAMA CABLE

CODE	Ø	LENGTH	TIP
130-30	*1.1 mm*	*420.0 mm*	*100.0 mm*

The kit has its own instruments for tensioning, lock and cut the excess segment of the cable

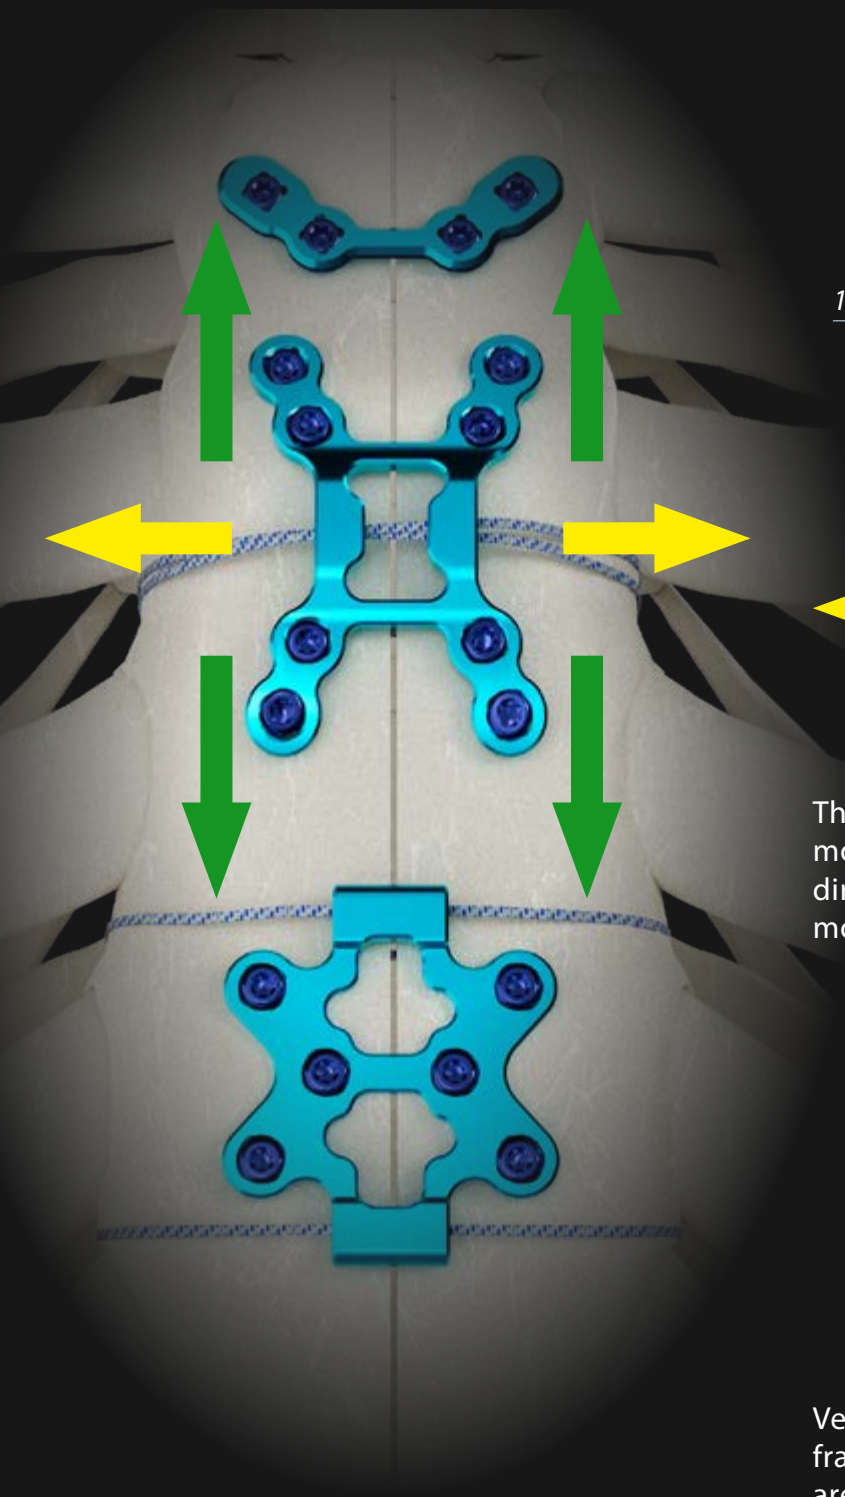
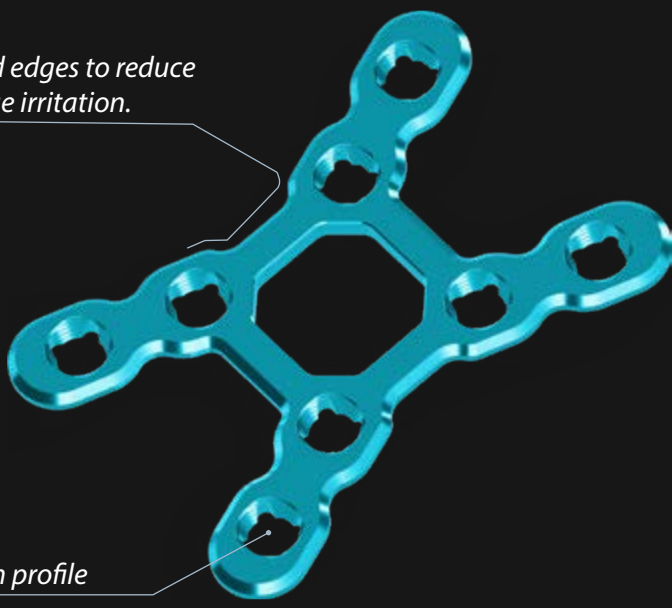
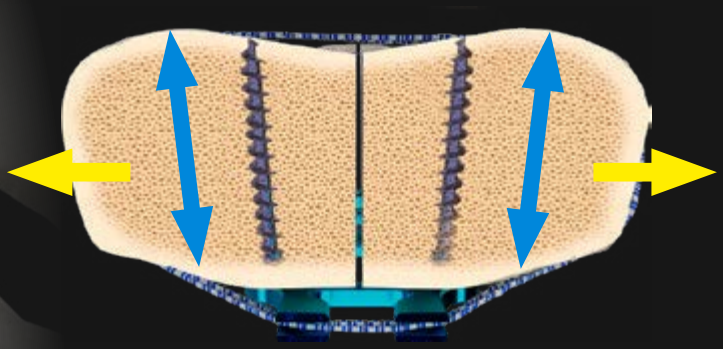
VERSALOCK STERNAL CLOSURE PLATING SYSTEM

Versalock Variable Angle Locking Sternum Plates System has been developed for the closure of median sternotomies or mini sternotomies, providing rigid fixation and improving the conditions for osteosynthesis and healing.

Eleven plates models options, including plates with specific holes for passing Stitch GMReis cerclage tape, so that the surgeon can choose the most suitable implants for each patient.







The locked plate provides rigid fixation, stabilizing movement in the craniocaudal and anteroposterior directions, and the tape provides stability of movement in the lateral direction.

Versalock Sternal Plates are also indicated for fixing fractures of the manubrium and sternal body, and are fixed with ±15° variable angle locking srews.

VERSALOCK RIBS FRACTURES PLATING SYSTEM

The Versalock Variable Angle Locking Rib Plates System was developed for rib fractures and osteotomies fixation, providing stability and rigid fixation, reducing pain and improving conditions for osteosynthesis and healing.

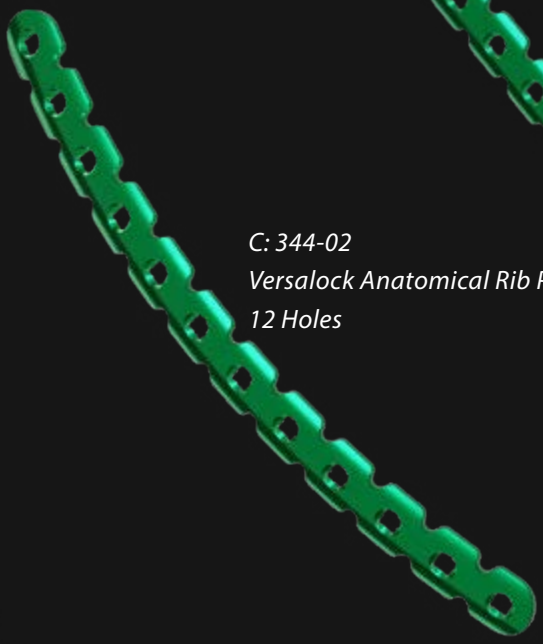
ADVANTAGES OF RIGID FIXATION IN PATIENTIS WITH FLAIL CHEST[1]:

- **4,84** fewer days in hospital
- **4,57** fewer days of mechanical ventilation
- **3,25** fewer days in the ICU
- **41%** lower risk of pneumonia
- **56%** lower risk of mortality

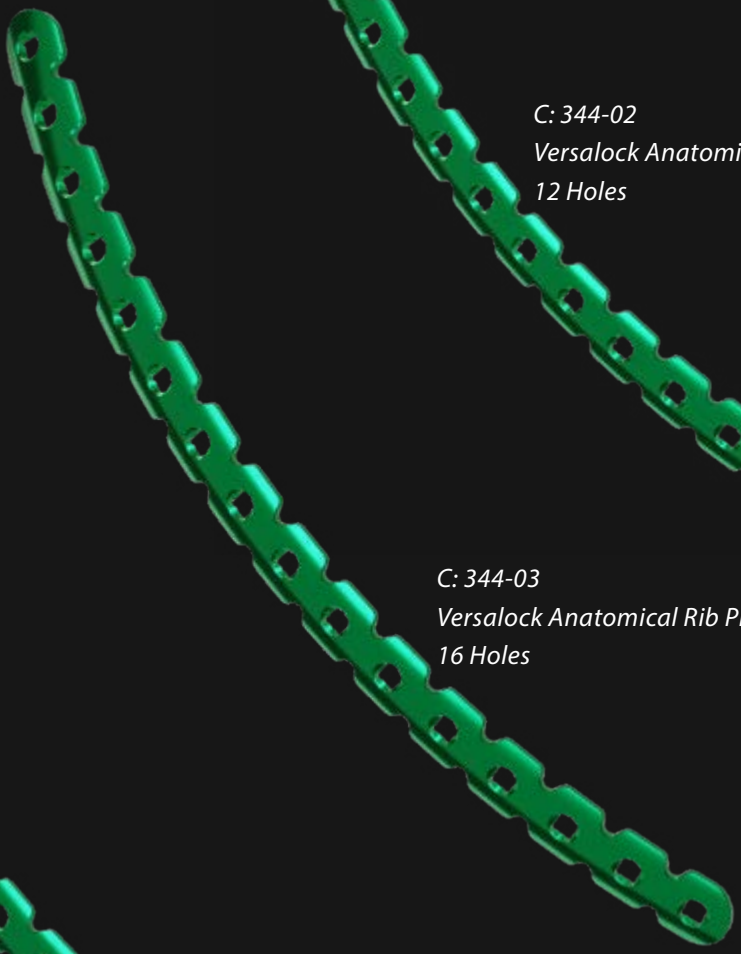
[1]Swart E, Laratta J, Slobogean G, Mehta S. Operative treatment of rib fractures in flail chest injuries: a meta-analysis and cost-effectiveness analysis. J Orthop Trauma. 2017;31(2):64-70.

Versalock Rib Plates are available in 4 models: straight, Anatomical, "Wave" and "T" for Rib and Sternum, with various length options, so that the surgeon can choose the most suitable implants for each patient.

C: 344-01
Versalock Rib Plate
8 Holes



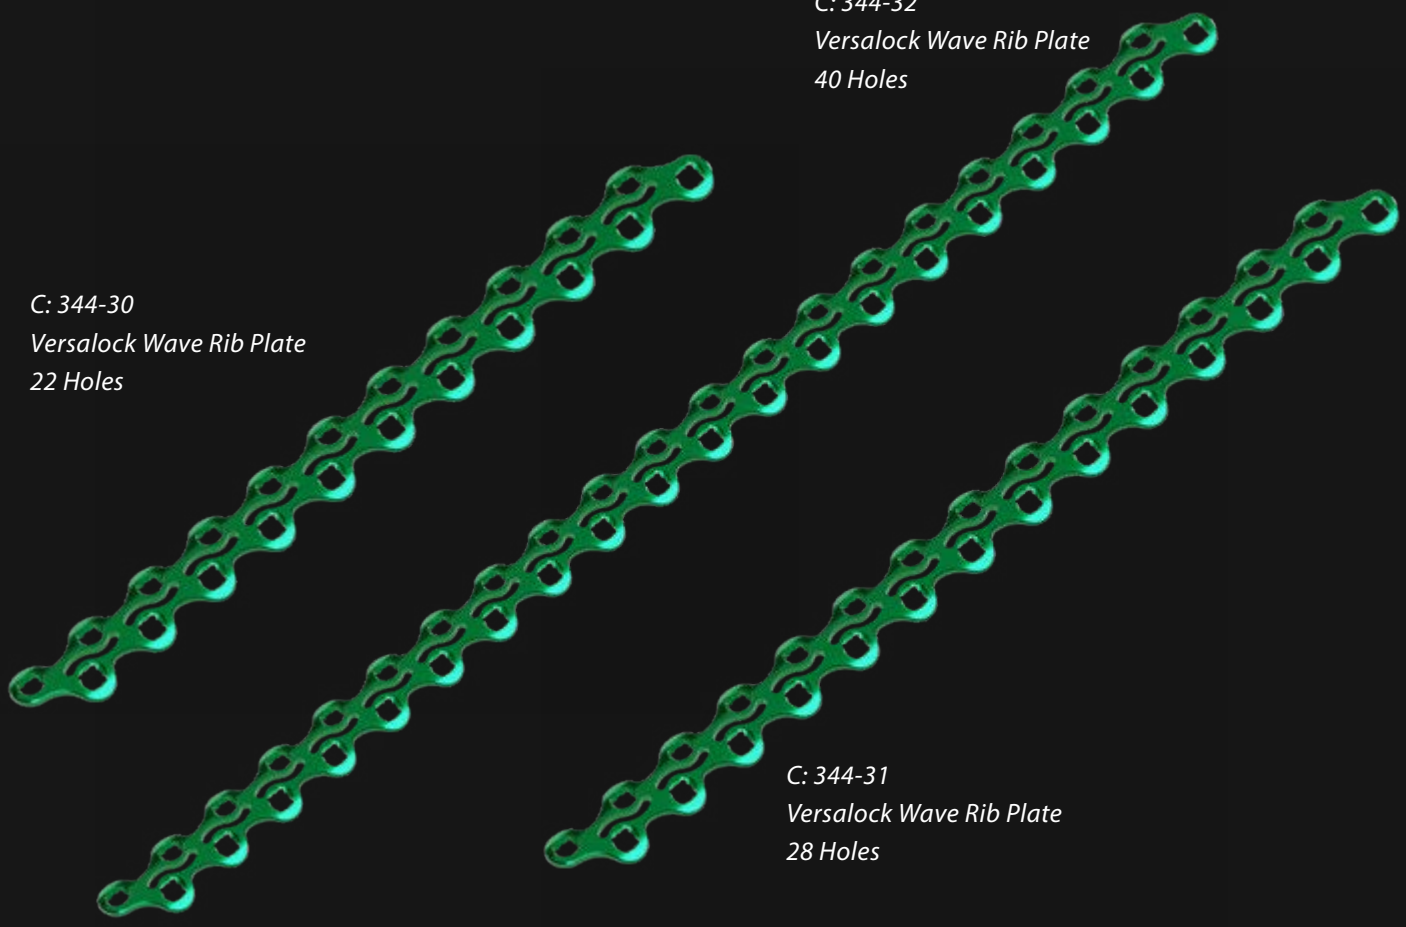
C: 344-02
Versalock Anatomical Rib Plate
12 Holes



C: 344-03
Versalock Anatomical Rib Plate
16 Holes

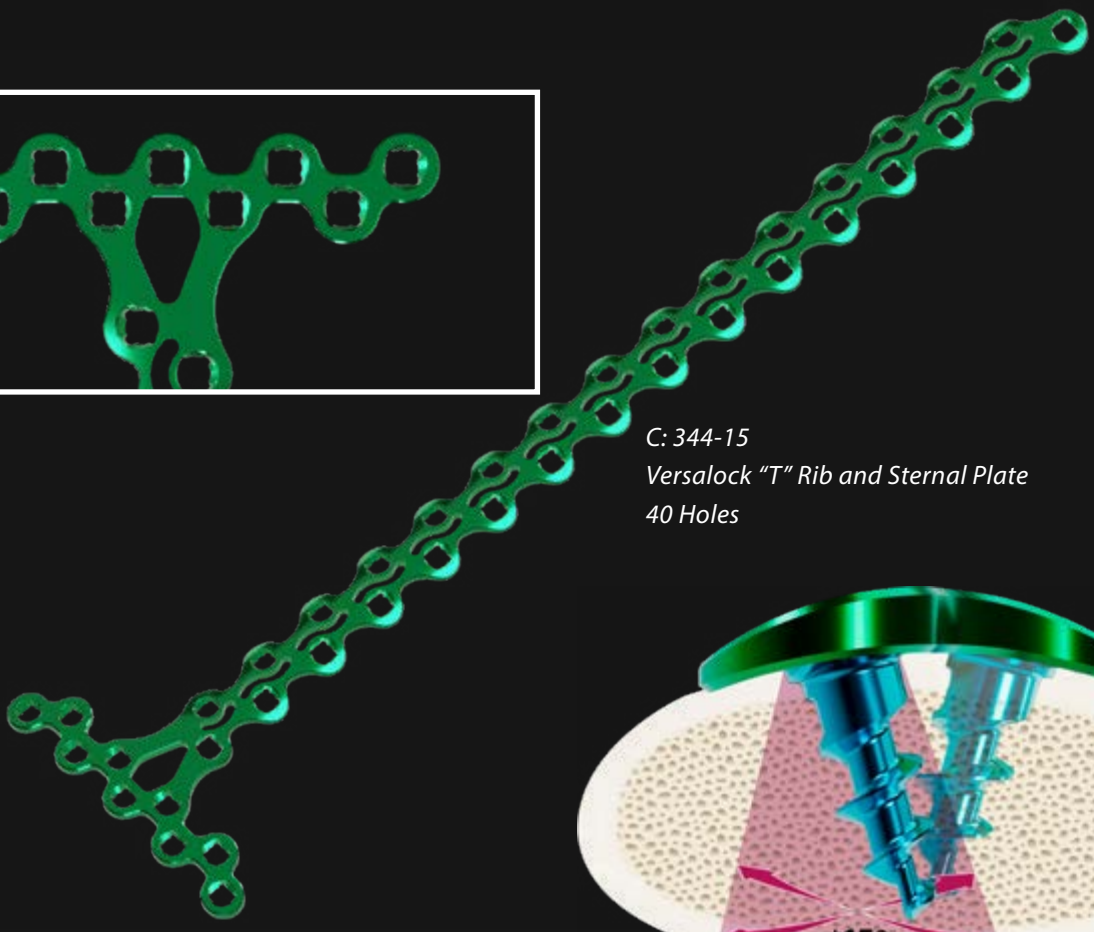
C: 344-04
Versalock Anatomical Rib Plate
24 Holes

C: 344-32
Versalock Wave Rib Plate
40 Holes

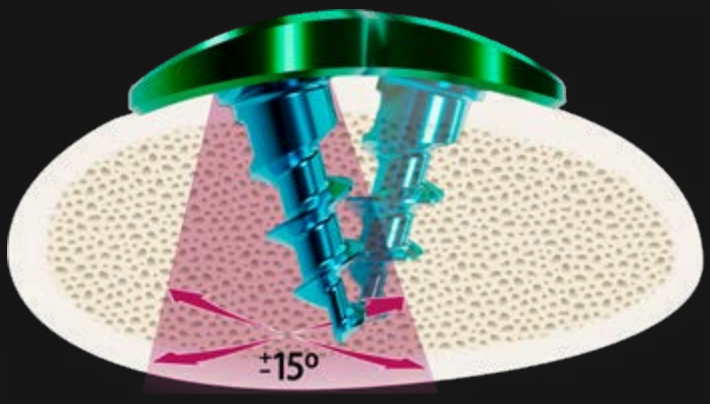


C: 344-30
Versalock Wave Rib Plate
22 Holes

C: 344-31
Versalock Wave Rib Plate
28 Holes



C: 344-15
Versalock "T" Rib and Sternal Plate
40 Holes



Variable angle locking "Wave" plate allows fixing with two rows of holes, providing convergence of the screws, increasing the rigidity of the fixing.

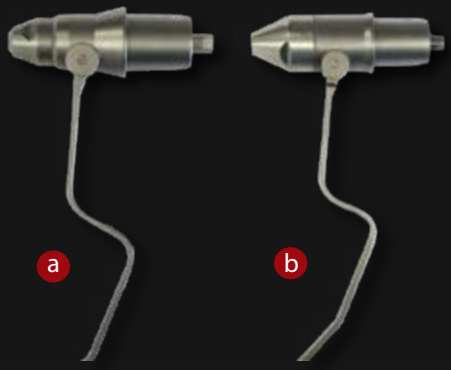
SOLARIS

The SOLARIS is a versatile 3-in-1 battery-powered orthopedic surgical equipment: drill, wire grip and sagittal saw. SOLARIS provides comfort to the surgeon through easy and quick replacement of components, reducing the surgical time. SOLARIS is the ideal equipment for the most diverse orthopedic procedures, especially those for extremities and sports medicine, as it is light and small.

Two drill chuck models: higher rotation speed (a) and higher torque (b).



Two pin driver models: 0.7 to 1.6 mm (a) and 1.8 to 4.0 mm (b).

Sagittal saw with efficient blade coupling mechanism.
